

# Chassis Management for NVIDIA®-Mellanox® Switch Systems with Sysfs User Manual

Rev. 2.6

## **Table of Contents**

| 1 | Release | Notes Update History   | 9  |
|---|---------|--|----|
| 2 | Introdu | ction  | 11 |
|   | 2.1 Sof | tware Components   | 11 |
|   | 2.2 Hie | rarchy and Structure   | 12 |
|   | 2.3 Sys | fs Initialization and Driver Registration                      | 13 |
| 3 | Virtual | SysFS Hierarchy  | 14 |
|   | 3.1 Cor | nfig Control   | 14 |
|   | 3.1.1   | Get ASIC Bus   | 14 |
|   | 3.1.2   | Set Chip-down/Chip-up Delay                                    | 15 |
|   | 3.1.3   | Read CPLD Number   | 15 |
|   | 3.1.4   | Read PSU VPD Info  | 15 |
|   | 3.1.5   | Get Hot-plug Fan Number  | 16 |
|   | 3.1.6   | Get Hot-plug PSU Number  | 16 |
|   | 3.1.7   | Get Hot-plug PWR Number  | 16 |
|   | 3.1.8   | Read SFP Counter   | 17 |
|   | 3.1.9   | Read Module Counter  | 17 |
|   | 3.1.10  | Read Asic Chipup Completed                                     | 17 |
|   | 3.1.11  | Read Init Done   | 17 |
|   | 3.1.12  | Read Max System Fans (rotors)                                  | 18 |
|   | 3.1.13  | Read Fan Drawer Number   | 19 |
|   | 3.1.14  | Read Fan Command   | 19 |
|   | 3.1.15  | Read Fan Max/Min Speed   | 19 |
|   | 3.1.16  | Read PSU Default Fan Speed                                     | 19 |
|   | 3.1.17  | Read/write Time Window for Thermal Control Periodic Log Report | 20 |
|   | 3.1.18  | Read PSU I2C Address   | 20 |
|   | 3.1.19  | Read PSU I2C Bus   | 20 |
|   | 3.1.20  | Read Thermal Delay   | 21 |
|   | 3.1.21  | Read DPU Number  | 21 |
|   | 3.1.22  | Read DPU Board type  | 21 |
|   | 3.1.23  | Read DPU pci bus id  | 22 |
|   | 3.1.24  | Read DPU board bus offset                                      | 22 |
|   | 3.1.25  | Read DPU bus offset  | 22 |
|   | 3.1.26  | Read DPU events  | 22 |
|   | 3.1.27  | Read DPU events to host  | 23 |
|   | 3.2 EEP | PROM Control   | 23 |
|   | 3.2.1   | Read CPU EEPROM Data   | 23 |
|   | 3.2.2   | Read Fan Module EEPROM Data                                    | 23 |
|   | 3.2.3   | Read Power Supply Module EEPROM Data                           | 25 |
|   | 3.2.4   | Read System Chassis EEPROM Data                                | 25 |

| 3.  | 2.5  | Read System Chassis EEPROM Parsed Data | . 25 |
|-----|------|--|------|
| 3.3 | Envi | ronment Control                        | . 25 |
| 3.  | 3.1  | Get A2D Voltage                        | . 25 |
| 3.  | 3.2  | Get Comex Voltage Current              | . 26 |
| 3.  | 3.3  | Get Comex Voltage Input                | . 26 |
| 3.  | 3.4  | Get Comex Voltage Power                | . 26 |
| 3.  | 3.5  | Get System Voltage Current             | . 27 |
| 3.  | 3.6  | Get System Voltage Input               | . 27 |
| 3.  | 3.7  | Get System Voltage Power               | . 27 |
| 3.4 | Ever | its                                    | . 27 |
| 3.  | 4.1  | Get FAN hot-plug event status          | . 28 |
| 3.  | 4.2  | Get PSU hot-plug event status          | . 28 |
| 3.  | 4.3  | PWR hot-plug event status              | . 28 |
| 3.  | 4.4  | DPU Ready event                        | . 29 |
| 3.  | 4.5  | DPU Shutdown event                     | . 29 |
| 3.5 | PSU  | FW                                     | . 31 |
| 3.  | 5.1  | Get Secondary FW version of PSU        | . 31 |
| 3.  | 5.2  | Get Primary FW version of PSU          | . 31 |
| 3.6 | DPU  | system attributes                      | . 32 |
| 3.  | 6.1  | Get DPU id                             | . 32 |
| 3.  | 6.2  | Get DPU boot progress                  | . 32 |
| 3.  | 6.3  | Get DPU cpld version                   | . 32 |
| 3.  | 6.4  | Get DPU cpld base version              | . 32 |
| 3.  | 6.5  | Get DPU auxiliary power reset reason   | . 33 |
| 3.  | 6.6  | Get DPU main board reset reason        | . 33 |
| 3.  | 6.7  | Get DPU comex power failure            | . 33 |
| 3.  | 6.8  | Get DPU power reset reason             | . 35 |
| 3.  | 6.9  | Get DPU thermal shutdown reason        | . 35 |
| 3.  | 6.10 | Get DPU tpm reset reason               | . 35 |
| 3.  | 6.11 | Get DPU perst reset reason             | . 35 |
| 3.  | 6.12 | Get DPU phy reset reason               | . 36 |
| 3.  | 6.13 | Get DPU usb phy reset reason           | . 36 |
| 3.  | 6.14 | Get DPU fpga part number               | . 36 |
| 3.  | 6.15 | Get DPU fpga minor version             | . 37 |
| 3.  | 6.16 | Get DPU ufm upgrade status             | . 37 |
| 3.  | 6.17 | Get DPU VR update status               | . 37 |
| 3.7 | DPU  | events                                 | . 38 |
| 3.  | 7.1  | Get DPU PLL power good indication      | . 38 |
| 3.  | 7.2  | Get DPU input power indication         | . 38 |
| 3.  | 7.3  | Get DPU serdes power indication        | . 38 |
| 3.  | 7.4  | Get DPU serdes analog power indication | . 40 |
| 3.  | 7.5  | Get DPU core power indication          | . 40 |

| 3.7.6     | Get DPU cpu power indication             | 40 |
|-----------|--|----|
| 3.7.7     | Get DPU digital interfaces power         | 40 |
| 3.7.8     | Get DPU ddr5 power indication            | 41 |
| 3.7.9     | Get DPU thermal trip indication          | 41 |
| 3.7.10    | Get DPU tps upgrade status               | 41 |
| 3.7.11    | Get DPU cpu power fault indication       | 41 |
| 3.7.12    | Get DPU cpu VR hot alert                 | 42 |
| 3.7.13    | Get DPU ddr5 fault indication            | 42 |
| 3.7.14    | Get DPU ddr5 hot alert                   | 42 |
| 3.8 LC /  | Alarms                                   | 43 |
| 3.8.1     | Get LC Hot Swap Power Alarm              | 43 |
| 3.8.2     | Get LC Voltage Input Alarm               | 43 |
| 3.8.3     | Get LC Voltage Current Alarm             | 43 |
| 3.8.4     | Get LC Voltage Power Alarm               | 44 |
| 3.9 LC I  | EEPROM                                   | 44 |
| 3.9.1     | Read LC EEPROM FRU                       | 44 |
| 3.9.2     | Read LC EEPROM INI                       | 44 |
| 3.9.3     | Read LC EEPROM VPD Parsed                | 45 |
| 3.9.4     | Read LC EEPROM INI Parsed                | 45 |
| 3.10 LC   | Environment                              | 45 |
| 3.10.1    | Get LC Voltage Current                   | 45 |
| 3.10.2    | Get LC Voltage Input                     | 46 |
| 3.10.3    | Get LC Voltage Power                     | 46 |
| 3.10.4    | Get LC Hot Swap Current                  | 46 |
| 3.10.5    | Get LC Hot Swap Input                    | 46 |
| 3.10.6    | Get LC Hot Swap Power                    | 47 |
| 3.10.7    | Get LC A2D Voltage                       | 47 |
| 3.10.8    | Get LC A2D Voltage Scale                 | 47 |
| 3.11 LC   | LED                                      | 48 |
| 3.11.1    | Get LC Status LED                        | 48 |
| 3.11.2    | Get LC Status LED Capabilities           | 48 |
| 3.11.3    | Set LC Status Green/Orange               | 48 |
| 3.11.4    | Set LC Status LED Green/Orange Delay Off | 49 |
| 3.11.5    | Set LC Status LED Green/Orange Delay On  | 49 |
| 3.12 LC   | Config                                   | 49 |
| 3.12.1    | Read LC CPLD Number                      | 49 |
| 3.12.2    | Read LC FPGA Number                      | 50 |
| 3.12.3    | Read LC Gearbox Number                   | 50 |
| 3.12.4    | Read LC Gearbox Manager Number           | 50 |
| 3.12.5    | Read LC Port Number                      | 51 |
| 3.12.6    | Read LC Module Counter                   | 51 |
| 2 12 1 (- | thormal                                  | E1 |

|    | 3.13.1    | Read LC Gearbox Temperature Input          | 51 |
|----|-----------|--|----|
|    | 3.13.2    | Get LC QSFP/SFP Module Thermal             | 52 |
|    | 3.13.3    | Read Temperature Critical Module           | 52 |
|    | 3.13.4    | Read Temperature Emergency Module          | 52 |
|    | 3.13.5    | Read Temperature Fault Module              | 52 |
|    | 3.13.6    | Read Temperature Input Module              | 53 |
| 3. | .14 LED ( | Control                                    | 53 |
|    | 3.14.1    | Get Fan Status LED                         | 53 |
|    | 3.14.2    | Get Fan LED Capabilities                   | 53 |
|    | 3.14.3    | Set Fan LED Green/[Amber/Red]              | 54 |
|    | 3.14.4    | Set Fan LED Green/[Amber/Red] Delay Off    | 54 |
|    | 3.14.5    | Set Fan LED Green/[Amber/Red] Delay On     | 54 |
|    | 3.14.6    | Get PSU Status LED                         | 55 |
|    | 3.14.7    | Get PSU LED Capabilities                   | 55 |
|    | 3.14.8    | Set PSU LED Green/[Amber/Red]              | 55 |
|    | 3.14.9    | Set PSU LED Green/[Amber/Red] Delay Off    | 56 |
|    | 3.14.10   | Set PSU LED Green/[Amber/Red] Delay On     | 56 |
|    | 3.14.11   | Get Status LED                             | 56 |
|    | 3.14.12   | Get Status LED Capabilities                | 57 |
|    | 3.14.13   | Set Status Green/[Amber/Red]               | 57 |
|    | 3.14.14   | Set Status LED Green/[Amber/Red] Delay Off | 57 |
|    | 3.14.15   | Set Status LED Green/[Amber/Red] Delay On  | 58 |
|    | 3.14.16   | Get Fan LED Capabilities                   | 58 |
| 3. | .15 Powe  | er Control                                 | 58 |
|    | 3.15.1    | Get PSU sensor Current + thresholds        | 59 |
|    | 3.15.2    | Get PSU sensor Voltage + thresholds        | 59 |
|    | 3.15.3    | Get PSU sensor Power + thresholds          | 60 |
|    | 3.15.4    | Get PSU sensor capability                  | 61 |
| 3. | .16 Syste | em / Power Control                         | 61 |
|    | 3.16.1    | Get ASIC Health                            | 62 |
|    | 3.16.2    | Get CPLD Major Version                     | 62 |
|    | 3.16.3    | Get CPLD Part Number                       | 62 |
|    | 3.16.4    | Get CPLD Minor Version                     | 62 |
|    | 3.16.5    | Get CPLD Full Version                      | 63 |
|    | 3.16.6    | Fan Direction                              | 63 |
|    | 3.16.7    | Set JTAG Mode                              | 64 |
|    | 3.16.8    | Set PSU On/Off                             | 64 |
|    | 3.16.9    | Set System Power Cycle                     | 65 |
|    | 3.16.10   | Set System Power Down                      | 65 |
|    | 3.16.11   | Set Line Card Power                        | 65 |
|    | 3.16.12   | Set Line Card Enable                       | 65 |
|    | 3.16.13   | Read Line Card Active                      | 66 |

| 3.16.14  | Read Line Card Powered                     | 66 |
|----------|--|----|
| 3.16.15  | Read Line Card Present                     | 66 |
| 3.16.16  | Read Line Card Ready                       | 67 |
| 3.16.17  | Read Line Card Synced                      | 67 |
| 3.16.18  | Read Line Card Verified                    | 67 |
| 3.16.19  | Read Line Card Reset Mask                  | 67 |
| 3.16.20  | Set Line Card Shutdown                     | 68 |
| 3.16.21  | Set VPD Write Protect                      | 68 |
| 3.16.22  | Set ASIC Up during PCIe root complex reset | 68 |
| 3.16.23  | Get Voltreg Update status                  | 69 |
| 3.16.24  | Get Config1, Config2                       | 69 |
| 3.16.25  | Get Ufm Version                            | 69 |
| 3.16.26  | Get Reset Cause                            | 70 |
| 3.17 The | ermal                                      | 72 |
| 3.17.1   | Read Switch ASIC Temperature               | 72 |
| 3.17.2   | Read Switch ASIC Temperature Normal        | 73 |
| 3.17.3   | Read Switch ASIC Temperature Critical      | 73 |
| 3.17.4   | Read Switch ASIC Temperature Emergency     | 73 |
| 3.17.5   | Read Switch ASIC Temperature Trip Critical | 74 |
| 3.17.6   | Read Switch Comex Temperature              | 74 |
| 3.17.7   | Read Cooling State                         | 74 |
| 3.17.8   | Read CPU Core Temperature                  | 75 |
| 3.17.9   | CPU Core Critical Temperature              | 75 |
| 3.17.10  | CPU Core Critical Temperature Alarm        | 75 |
| 3.17.11  | CPU Core Temperature Max                   | 76 |
| 3.17.12  | Read CPU Pack Temperature                  | 76 |
| 3.17.13  | CPU Pack Critical Temperature              | 76 |
| 3.17.14  | CPU Pack Critical Temperature Alarm        | 76 |
| 3.17.15  | CPU Pack Temperature Max                   | 77 |
| 3.17.16  | Read Fan Max Speed                         | 77 |
| 3.17.17  | Read Fan Min Speed                         | 77 |
| 3.17.18  | Read Fan Direction                         | 77 |
| 3.17.19  | Read Fan Status                            | 78 |
| 3.17.20  | Read Fan Fault                             | 78 |
| 3.17.21  | Read Port Ambient                          | 79 |
| 3.17.22  | Read PSU Temperature                       | 79 |
| 3.17.23  | Read PSU Alarm                             | 79 |
| 3.17.24  | Read PSU Max                               | 79 |

| 1.4      | Sept 23, 2019     | Added "2.6.3 Fan_Dir"  Modified "2.6.8 Get Reset Cause"   |  |
| 1.3      | June 13, 2019     | Added:  Thermal"  Watchdog"   |  |
| 1.2      | April 12, 2019    | Updated Sysfs   |  |
| 1.1      | December 18, 2018 | Added support for new systems   |  |
| 1.0      | September 8, 2015 | First release   |  |

#### 2 Introduction

Mellanox hw-management package uses a virtual file system provided by the Linux kernel called sysfs.

The sysfs file system enumerates the devices and buses attached to the system in a file system hierarchy that can be accessed from the user space.

The major advantage of working with sysfs is that it makes HW hierarchy easy to understand and control without having to learn about HW component location and the buses through which they are connected.

#### 2.1 Software Components

Figure 1 presents the software architecture layout and Figure 2 presents layer separation for sysfs support.

Figure 1 - System Architecture Layout

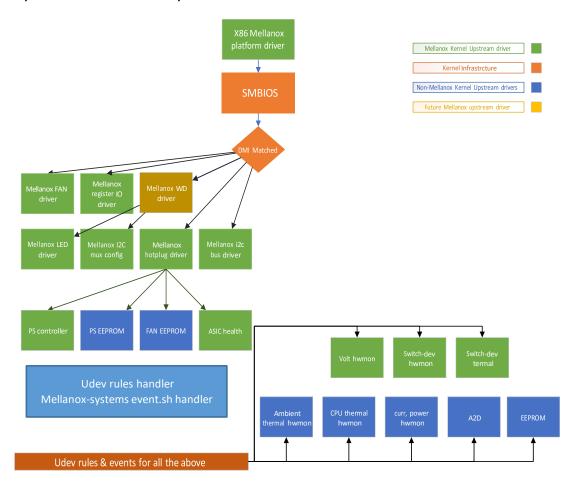

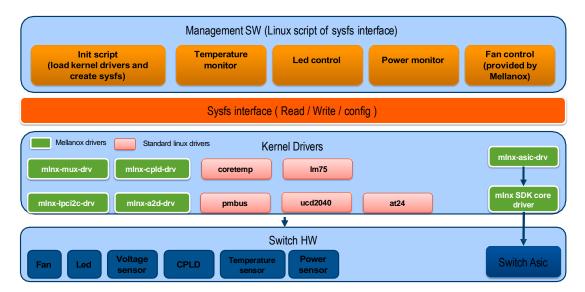

Figure 2 - Sysfs Layout

## 2.2 Hierarchy and Structure

The package uses the Linux default hierarchy structure of sysfs under the directory /var/run/hw-management.

This path is used by existing applications that use auto-discovery to find existing HW components. Two examples for such applications are:

- ▶ libsysfs the libraries provide a consistent and stable interface for querying system device information exposed through sysfs.
- systool a utility built upon libsysfs that lists devices by bus, class, and topology.

The disadvantage of using this path is that the hierarchy model includes the BUS type and location model which is subject to change between different system types.

To resolve this limitation, the virtual hierarchy structure that is not HW dependent is supported. This hierarchy is a collection of soft links to the default sysfs structure. This document describes the way to work with this hierarchy in order to control the HW.

Chassis attributes information exported through sysfs can be utilized by a number of standard Linux tools. So, for example, the following are tools from the Linux packages Im-sensors and fancontrol, which are capable of operating on top of sysfs infrastructure:

- pwmconfig tests the pulse width modulation (PWM) outputs of sensors and configures fancontrol
- fancontrol automated software-based fan speed regulation
- sensors print sensors information

#### 2.3 Sysfs Initialization and Driver Registration

As describe in the previous sections, sysfs structure provide access to HW drivers. These drivers need to be initialized before using sysfs. In addition, Mellanox virtual hierarchy also needs to be created in order to use it.

The package provides a simple way to initialize the drivers using the set of the shell scripts. These scripts support initialization and de-initialization of driver, virtual hierarchy structure, udev events handling, based on a set of Mellanox system specific udev rules.

Package contains the following files, used within the workload:

- ▶ /lib/systemd/system/hw-management.service: system entries for thermal control activation and de-activation.
- ▶ /lib/udev/rules.d/50-hw-management-events.rules: udev rules defining the triggers on which events should be handled. When trigger is matched, rule data is to be passed to the event handler (see below file /usr/bin/hw-management-events.sh).
- ▶ /usr/bin/hw-management-control.sh: contains thermal algorithm implementation.
- /usr/bin/hw-management-chassis-events.sh and /usr/bin/hw-management-thermal-events.sh: handle udev triggers, according to the received data, it creates or destroys symbolic links to sysfs entries. It allows to create system independent entries and it allows thermal controls to work over this system independent model. Raises signal to hw-management-control in case of fast temperature decreasing. It could happen in case one or few very hot port cables have been removed. Sets PS units internal FAN speed to default value when unit is connected to power source.
- /usr/bin/hw-management.sh: performs initialization and de-initialization, detects the system type, connects thermal drivers according to the system topology, activates and deactivates thermal algorithm.
- /usr/bin/hw-management-led-state-conversion.sh and /usr/bin/hw-management-powerhelper.sh: helper scripts.
- /etc/modprobe.d/hw-management.conf and /etc/modules-load.d/hw-management-modules.conf: configuration for kernel modules loading.

For more details follow package README file.

## **3** Virtual SysFS Hierarchy

Mellanox virtual hierarchy supports the following HW control (\$bsp\_path below is a location of virtual SysFS hierarchy, in standard Linux distributions, like Debian, RedHat, Fedora, etcetera this is /var/run/hw-management folder).

Table 1 - Mellanox Hierarchy Node Support

| Node Path              | Purpose   |
|------------------------|---|
| \$bsp_path/config      | Internal system specific configuration data                                       |
| \$bsp_path/eeprom      | Gets raw data from EEPROM in system modules                                       |
| \$bsp_path/environment | Gets information on environmental sensors (A2D, Volt, Curr)                       |
| \$bsp_path/led         | Gets/sets LED color   |
| \$bsp_path/power       | Gets information from power sensors   |
| \$bsp_path/system      | Gets/sets system variables and settings (CPLD version, fan dir, reset, pwr cycle) |
| \$bsp_path/thermal     | Gets variant thermal sensors in systems and gets/sets fan attributes              |
| \$bsp_path/watchdog    | Standard whatcdog sysfs attributes  |
| \$bsp_path/Alarm       | Get System chassis  |
| \$bsp_path/jtag        | Provides interface for JTAG CPLD burn   |

Detailed information on each of these nodes can be found in the following sections.

## 3.1 Config Control

#### 3.1.1 Get ASIC Bus

| Node name       | \$bsp_path/config/                                  | \$bsp_path/config/asic_bus |        |  |  |
|-----------------|---|----------------------------|--------|--|--|
| Description     | Get system ASIC b                                   | Get system ASIC bus number |        |  |  |
| Access          | Read only   |                            |        |  |  |
| Release version | 1.0   | 1.0                        |        |  |  |
| Arguments       | Name  | Data type                  | Values |  |  |
|                 | Status  | Integer                    | 1-99   |  |  |
| Example         | Get asic bus number: cat \$bsp_path/config/asic_bus |                            |        |  |  |

## 3.1.2 Set Chip-down/Chip-up Delay

| Node name  | \$bsp_path/config/chipdown_delay<br>\$bsp_path/config/chipup_delay           |                   |                               |  |
|--|--|-------------------|-------------------------------|--|
| Description  | Set delay duration in seconds for hw mgmt service from the down/up event.    |                   |                               |  |
| Access   | Write/Read   |                   |                               |  |
| Release version  | ease version 1.0   |                   |                               |  |
| Arguments  | Name   | Data type         | Values                        |  |
|  | Status   | Integer (seconds) | 0 – no delay<br>other – delay |  |
| Example Get chipdown value: cat \$bsp_path/config/chipdown_delay |  |                   |                               |  |
|  | Set 5 seconds delay in chipup value: echo 5 > \$bsp_path/config/chipup_delay |                   |                               |  |

#### 3.1.3 Read CPLD Number

| Node name       | \$bsp_path/config | \$bsp_path/config/cpld_num                      |  |  |
|-----------------|-------------------|---|--|--|
| Description     | Get the number of | Get the number of CPLD modules in the system    |  |  |
| Access          | Read only         | Read only                                       |  |  |
| Release version | 1.0               | 1.0   |  |  |
| Arguments       | Name              | Name Data type Values                           |  |  |
|                 | Status            | Status Integer 1-X                              |  |  |
| Example         |                   | Get CPLD number: cat \$bsp_path/config/cpld_num |  |  |

#### 3.1.4 Read PSU VPD Info

| Node name       | \$bsp_path/eeprom/psu{n}_vpc                       | \$bsp_path/eeprom/psu{n}_vpd              |             |  |
|-----------------|--|---|-------------|--|
| Description     | Get PSU VPD info in human rea                      | Get PSU VPD info in human readable format |             |  |
| Access          | Read only  | Read only                                 |             |  |
| Release version | V.7.0010.1300                                      | V.7.0010.1300                             |             |  |
| Arguments       | Name   | Name Data type Values                     |             |  |
|                 | Status   | ASCII                                     | EEPROM info |  |
| Example         | Get PSU VPD info: cat \$bsp_path/eeprom/psu{n}_vpd |   |             |  |

## 3.1.5 Get Hot-plug Fan Number

| Node name       | \$bsp_path/config/hot   | \$bsp_path/config/hotplug_fans        |  |  |
|-----------------|-------------------------|---------------------------------------|--|--|
| Description     | Get hot-plug FAN nur    | Get hot-plug FAN number in the system |  |  |
| Access          | Read only               | Read only                             |  |  |
|                 | It can be zero on fixed | It can be zero on fixed system.       |  |  |
| Release version | V.7.0010.1300           | V.7.0010.1300                         |  |  |
| Arguments       | Name                    | Name Data type Values                 |  |  |
|                 | Status                  | Status Integer 0-X                    |  |  |
| Example         | Get hot-plug fan num    | Get hot-plug fan number:              |  |  |
|                 | cat \$bsp_path/config,  | cat \$bsp_path/config/hotplug_fans    |  |  |

## 3.1.6 **Get Hot-plug PSU Number**

| Node name       | \$bsp_path/config/hotplug_fans   |           |        |
|-----------------|--|-----------|--------|
| Description     | Get hot-plug PSU number in the system. It can be zero on fixed system. |           |        |
| Access          | Read only  |           |        |
| Release version | V.7.0010.1300  |           |        |
| Arguments       | Name   | Data type | Values |
|                 | Status   | Integer   | 0-X    |
| Example         | Get hot-plug psu number: cat \$bsp_path/config/hotplug_psus            |           |        |

## 3.1.7 **Get Hot-plug PWR Number**

| Node name       | \$bsp_path/config/hotplug_pwrs  |         |     |
|-----------------|---|---------|-----|
| Description     | Get hot-plug Power cable number in the system.  It can be zero on fixed system. |         |     |
| Access          | Read only   |         |     |
| Release version | V.7.0010.1300   |         |     |
| Arguments       | Name Data type Values   |         |     |
|                 | Status  | Integer | 0-X |

| Example | Get hot-plug power cable number:   |
|---------|------------------------------------|
|         | cat \$bsp_path/config/hotplug_pwrs |

#### 3.1.8 Read SFP Counter

| Node name       | \$bsp_path/config/sfp_counter                      |                             |    |
|-----------------|--|-----------------------------|----|
| Description     | Get the number of sfp interfaces in the system     |                             |    |
|                 | Note: this is attribue is v                        | alid only for I2C ASIC driv | er |
| Access          | Read only  |                             |    |
| Release version | 1.0  |                             |    |
| Arguments       | Name Data type Values                              |                             |    |
|                 | Status Integer 1-X                                 |                             |    |
| Example         | Get sfp counter: cat \$bsp_path/config/sfp_counter |                             |    |

#### 3.1.9 Read Module Counter

| Node name       | \$bsp_path/config/module_counter                         |  |  |
|-----------------|--|--|--|
| Description     | Get the number of sfp modules in the system              |  |  |
|                 | Note: this is attribue is valid only for I2C ASIC driver |  |  |
| Access          | Read only  |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values                                    |  |  |
|                 | Status Integer 1-X                                       |  |  |
| Example         | Get sfp module: cat \$bsp_path/config/module_counter     |  |  |

## 3.1.10 Read Asic Chipup Completed

| Node name       | \$bsp_path/config/asic_chipup_completed   |  |  |
|-----------------|---|--|--|
| Description     | counter of successful ASIC driver initialization completions:  0 - no successful initialization compilation.  1 - one ASIC device has been successful initialized.  n – 'n' ASIC devices has been successful initialized. |  |  |
| Access          | Read only   |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | Status Integer 1-X  |  |  |
| Example         | Get asic chipup completed: cat \$bsp_path/config/asic_chipup_completed  |  |  |

#### 3.1.11 Read Init Done

| Node name       | \$bsp_path/config/asics_init_done                          |                            |  |
|-----------------|--|----------------------------|--|
| Description     | is to be set to one, when 'asic_chipup_completed'          |                            |  |
|                 | attribute matches 'asic_r                                  | num' attribute (old static |  |
|                 | attribute /var/run/hw-                                     |                            |  |
|                 | management/config/asic_num)                                |                            |  |
| Access          | Read only  |                            |  |
| Release version | 1.0  |                            |  |
| Arguments       | Name Data type Values                                      |                            |  |
|                 | Status Integer 1-X   |                            |  |
| Example         | Get asics init done: cat \$bsp_path/config/asics_init_done |                            |  |

## 3.1.12 Read Max System Fans (rotors)

| Node name       | \$bsp_path/config/max_tachos                         |                                |  |  |
|-----------------|--|--------------------------------|--|--|
| Description     | Get max number of syste                              | Get max number of system fans. |  |  |
| Access          | Read only  | Read only                      |  |  |
| Release version | 1.0  |                                |  |  |
| Arguments       | Name Data type Values                                |                                |  |  |
|                 | Status Integer 1-X                                   |                                |  |  |
| Example         | Get fans max value: cat \$bsp_path/config/max_tachos |                                |  |  |

#### 3.1.13 **Read Fan Drawer Number**

| Node name       | \$bsp_path/confi | \$bsp_path/config/fan_drwr_num                                       |  |  |
|-----------------|------------------|--|--|--|
| Description     | Get number of s  | Get number of system FAN drawers                                     |  |  |
| Access          | Read only        | Read only  |  |  |
| Release version | 1.0              | 1.0  |  |  |
| Arguments       | Name             | Name Data type Values  |  |  |
|                 | Status           | Status Integer 1-X   |  |  |
| Example         |                  | Get number of system FAN drawers: cat \$bsp_path/config/fan_drwr_num |  |  |

#### 3.1.14 Read Fan Command

| Node name       | \$bsp_path/config | \$bsp_path/config/fan_command                      |  |  |
|-----------------|-------------------|--|--|--|
| Description     | Get PMBUS com     | Get PMBUS command for PSU config                   |  |  |
| Access          | Read only         | Read only  |  |  |
| Release version | 1.0               | 1.0  |  |  |
| Arguments       | Name              | Name Data type Values                              |  |  |
|                 | Status            | Status Hex Oxhh                                    |  |  |
| Example         |                   | Get fan command: cat \$bsp_path/config/fan_command |  |  |

#### 3.1.15 Read Fan Max/Min Speed

| Node name       | \$bsp_path/config/fan_max_speed<br>\$bsp_path/config/fan_min_speed  |                   |   |
|-----------------|---|-------------------|---|
| Description     | Get the absolute system   | fan max/min speed |   |
| Access          | Read only   |                   |   |
| Release version | 1.0   |                   |   |
| Arguments       | Name Data type Values   |                   |   |
|                 | Status  | Integer           | Х |
| Example         | Get fan max speed: cat \$bsp_path/config/fan_max_speed Get fan min speed: cat \$bsp_path/config/fan_min_speed |                   |   |

#### 3.1.16 **Read PSU Default Fan Speed**

| Node name   | \$bsp_path/config/fan_psu_defualt       |
|-------------|---|
| Description | Get the default value of PSU fans speed |

| Access          | Read only   |           |           |
|-----------------|---|-----------|-----------|
| Release version | 1.0   |           |           |
| Arguments       | Name  | Data type | Values    |
|                 | Status  | HEX       | 0x14-0x64 |
| Example         | Get fan PSU default:<br>cat \$bsp_path/config/fan_psu_default |           |           |

# 3.1.17 Read/write Time Window for Thermal Control Periodic Log Report

| Node name       | \$bsp_path/config/periodic_report  |                        |  |
|-----------------|--|------------------------|--|
| Description     | Get/Set time for thermal control periodic log report (sec, default 7200) |                        |  |
| Access          | Read/Write   |                        |  |
| Release version | V.7.0010.1300  |                        |  |
| Arguments       | Name Data type Values  |                        |  |
|                 | Status Integer X   |                        |  |
| Example         | Set periodic log report time:  |                        |  |
|                 | echo 3000 > \$bsp_path/o   | config/periodic_report |  |

#### 3.1.18 Read PSU I2C Address

| Node name       | \$bsp_path/config | \$bsp_path/config/psu <power module="" number="" supply="">_i2c_addr</power> |  |  |
|-----------------|-------------------|--|--|--|
| Description     | Get the I2C addre | Get the I2C address of PSU for direct connection                             |  |  |
| Access          | Read only         | Read only  |  |  |
| Release version | 1.0               | 1.0  |  |  |
| Arguments       | Name              | Name Data type Values  |  |  |
|                 | Status            | Status Hex Oxhh  |  |  |
| Example         |                   | Get PSU1 I2C address: cat \$bsp_path/config/psu1_i2c_addr                    |  |  |

#### 3.1.19 Read PSU I2C Bus

| Node name       | \$bsp_path/config/psu <power module="" number="" supply="">_i2c_bus</power> |  |  |
|-----------------|---|--|--|
| Description     | Get the I2C bus of PSU for direct connection                                |  |  |
| Access          | Read only   |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | Status Integer X  |  |  |

| Example | Get PSU1 I2C bus:                  |
|---------|------------------------------------|
|         | cat \$bsp_path/config/psu1_i2c_bus |

## 3.1.20 **Read Thermal Delay**

| Node name       | \$bsp_path/config/termal_delay   |                   |   |
|-----------------|--|-------------------|---|
| Description     | Get the delay duration (seconds) since the HW mgmt service starts until thermal control init |                   |   |
| Access          | Read only  |                   |   |
| Release version | 1.0  |                   |   |
| Arguments       | Name Data type Values  |                   |   |
|                 | Status   | Integer (seconds) | Х |
| Example         | Get thermal delay: cat \$bsp_path/config/thermal_delay                                       |                   |   |

#### 3.1.21 Read DPU Number

| Node name       | \$bsp_path/config                | \$bsp_path/config/dpu_num |        |  |
|-----------------|----------------------------------|---------------------------|--------|--|
| Description     | Number of DPUs (                 | 1-4)                      |        |  |
| Access          | Read only                        | Read only                 |        |  |
| Release version | 1.0                              |                           |        |  |
| Arguments       | Name                             | Data type                 | Values |  |
|                 | Status                           | Integer (number)          | X      |  |
| Example         | Get dpu number cat \$bsp_path/co |                           |        |  |

## 3.1.22 Read DPU Board type

|                 | , , , , , , , , , , , , , , , , , , ,                   |        |                  |
|-----------------|---|--------|------------------|
| Node name       | \$bsp_path/config/dpu_board_type                        |        |                  |
| Description     | Whether DPU sensors are loaded static or dynamic        |        |                  |
| Access          | Read only   |        |                  |
| Release version | 1.0   |        |                  |
| Arguments       | Name Data type Values                                   |        |                  |
|                 | Status  | String | Static / dynamic |
| Example         | Get dpu board tyoe cat \$bsp_path/config/dpu_board_type |        |                  |

#### 3.1.23 Read DPU pci bus id

| Node name       | \$bsp_path/config/dpu[1-4]_pci_bus_id                             |              |         |
|-----------------|---|--------------|---------|
| Description     | PCI bus id for the DPUc   |              |         |
| Access          | Read only   |              |         |
| Release version | 1.0   |              |         |
| Arguments       | Name Data type Values   |              |         |
|                 | Status  | Hex (number) | XX.XX.X |
| Example         | Get dpu pci bus number: cat \$bsp_path/config/dpu[1-4]_pci_bus_id |              |         |

#### 3.1.24 Read DPU board bus offset

| Node name       | \$bsp_path/config/dpu_brd_bus_offset                            |                  |        |
|-----------------|---|------------------|--------|
| Description     | DPU i2c bus offset  |                  |        |
| Access          | Read only   |                  |        |
| Release version | 1.0   |                  |        |
| Arguments       | Name  | Data type        | Values |
|                 | Status  | Integer (number) | Х      |
| Example         | Get dpu i2c bus offset cat \$bsp_path/config/dpu_brd_bus_offset |                  |        |

#### 3.1.25 Read DPU bus offset

| Node name       | \$bsp_path/config/dpu_bus_off                                |  |  |
|-----------------|--|--|--|
| Description     | I2c bus offset for the dpu                                   |  |  |
|                 |  |  |  |
| Access          | Read only  |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | Status Integer (number) X                                    |  |  |
| Example         | Get dpu bus offset number: cat \$bsp_path/config/dpu_bus_off |  |  |

#### 3.1.26 **Read DPU events**

| Node name       | \$bsp_path/config/dpu_events                                     |  |  |
|-----------------|--|--|--|
| Description     | Events supported by DPUs   |  |  |
| Access          | Read only  |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | Status String Ev1, ev2, etc.                                     |  |  |
| Example         | Get the events supported by DPU cat \$bsp_path/config/dpu_events |  |  |

#### 3.1.27 Read DPU events to host

| Node name       | \$bsp_path/config/dpu_to_host_events                            |           |        |
|-----------------|---|-----------|--------|
| Description     | DPU events to host  |           |        |
| Access          | Read only   |           |        |
| Release version | 1.0   |           |        |
| Arguments       | Name  | Data type | Values |
|                 | Status  | String    | X      |
| Example         | Get dpu events to host cat \$bsp_path/config/dpu_to_host_events |           |        |

#### 3.2 EEPROM Control

#### 3.2.1 Read CPU EEPROM Data

| Node name       | \$bsp_path/eeprom/cpu_info                                 |  |  |
|-----------------|--|--|--|
| Description     | Read CPU raw data in hexadecimal format                    |  |  |
| Access          | Read only  |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values                                      |  |  |
|                 | EEPROM information Hex Hex dump format of memory           |  |  |
| Example         | Get CPU EEPROM information: cat \$bsp_path/eeprom/cpu_info |  |  |

#### 3.2.2 Read Fan Module EEPROM Data

| Node name | \$bsp_path/eeprom/fan <fan module="" number="">_info</fan> |
|-----------|--|
|-----------|--|

| Description     | Read fan module raw data in hexadecimal format                                 |  |  |  |
|-----------------|--|--|--|--|
|                 | Note: This attribute is not supported on Comex CPU systems.                    |  |  |  |
| Access          | Read only  |  |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name Data type Values  |  |  |  |
|                 | EEPROM information Hex Hex dump format of memory                               |  |  |  |
| Example         | Get fan module 1 EEPROM information:<br>hexdump -C \$bsp_path/eeprom/fan1_info |  |  |  |

#### 3.2.3 Read Power Supply Module EEPROM Data

| Node name       | \$bsp_path/eeprom/psu <power module="" number="" supply="">_info</power>      |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read power supply module raw data in hexadecimal format                       |  |  |  |
| Access          | Read only   |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | EEPROM information Hex Hex dump format of memory                              |  |  |  |
| Example         | Get power supply module 1 EEPROM information: cat \$bsp_path/eeprom/psu1_info |  |  |  |

#### 3.2.4 Read System Chassis EEPROM Data

| Node name       | \$bsp_path/eeprom/vpd   | \$bsp_path/eeprom/vpd_info                         |  |  |  |
|-----------------|---|--|--|--|--|
| Description     | Read system chassis rav   | Read system chassis raw data in hexadecimal format |  |  |  |
| Access          | Read only   | Read only  |  |  |  |
| Release version | 1.0   | 1.0  |  |  |  |
| Arguments       | Name  | Name Data type Values                              |  |  |  |
|                 | EEPROM information Hex Hex dump format of memory                      |  |  |  |  |
| Example         | Get system chassis EEPROM information: cat \$bsp_path/eeprom/vpd_info |  |  |  |  |

#### 3.2.5

#### **Read System Chassis EEPROM Parsed Data**

| Node name       | \$bsp_path/eeprom/vpd_data  |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read system chassis parsed data in text format                        |  |  |  |
| Access          | Read only   |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | EEPROM information string string format of memory                     |  |  |  |
| Example         | Get system chassis EEPROM information: cat \$bsp_path/eeprom/vpd_data |  |  |  |

#### 3.3 **Environment Control**

#### 3.3.1 Get A2D Voltage

| Node name | \$bsp_path/environment/a2d_iio:device< number>_raw <index></index> |
|-----------|--|
|-----------|--|

| Description     | Get raw voltage input from A2D sensor   |  |  |  |
|-----------------|---|--|--|--|
| Access          | Read only   |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | Voltage Integer X   |  |  |  |
| Example         | Get voltage input from A2D1: cat \$bsp_path/environment/a2d_iio:device0_raw_1 |  |  |  |

## 3.3.2 **Get Comex Voltage Current**

| Node name       | \$bsp_path/envir  | \$bsp_path/environment/comex_voltmon <index>_curr<index>_input</index></index>                      |  |  |
|-----------------|-------------------|---|--|--|
| Description     | Get raw voltage   | Get raw voltage input from Comex  |  |  |
|                 | Note: This attrib | Note: This attribute is for Comex based system only   |  |  |
| Access          | Read only         | Read only   |  |  |
| Release version | 1.0               | 1.0   |  |  |
| Arguments       | Name              | Name Data type Values   |  |  |
|                 | Voltage           | Voltage Integer X   |  |  |
| Example         |                   | Get comex voltage monitor 1 current2 reading: cat \$bsp_path/environment/comex_voltmon1_curr2_input |  |  |

## 3.3.3 Get Comex Voltage Input

| Node name       | \$bsp_path/environment/comex_voltmon <index>_in<index>_input</index></index>                   |   |  |  |
|-----------------|--|---|--|--|
| Description     | Get raw voltage input from Comex   |   |  |  |
|                 | Note: This attribute is fo   | Note: This attribute is for Comex based system only |  |  |
| Access          | Read only  |   |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name Data type Values  |   |  |  |
|                 | Voltage Integer X  |   |  |  |
| Example         | Get Comex voltage monitor 1 input reading: cat \$bsp_path/environment/comex_voltmon1_in1_input |   |  |  |

## 3.3.4 **Get Comex Voltage Power**

| Node name       | \$bsp_path/environment/comex_voltmon <index>_power<index>_input</index></index> |  |
|-----------------|---|--|
| Description     | Get raw voltage input from Comex  |  |
|                 | Note: This attribute is for Comex based system only                             |  |
| Access          | Read only   |  |
| Release version | 1.0   |  |

| Arguments | Name  | Data type | Values |
|-----------|---|-----------|--------|
|           | Voltage   | Integer   | X      |
| Example   | Get Comex voltage monitor 1 power reading:<br>cat \$bsp_path/environment/comex_power2_input |           |        |

## 3.3.5 Get System Voltage Current

| Node name       | \$bsp_path/enviro | \$bsp_path/environment/voltmon <index>_curr<index>_input</index></index>                |  |  |  |
|-----------------|-------------------|---|--|--|--|
| Description     | Get raw voltage i | Get raw voltage input from system   |  |  |  |
| Access          | Read only         | Read only   |  |  |  |
| Release version | 1.0               | 1.0   |  |  |  |
| Arguments       | Name              | Name Data type Values   |  |  |  |
|                 | Voltage           | Voltage Integer X   |  |  |  |
| Example         | _                 | Get voltage monitor 1 current2 reading: cat \$bsp_path/environment/voltmon1_curr2_input |  |  |  |

#### 3.3.6 Get System Voltage Input

| Node name       | \$bsp_path/enviro | \$bsp_path/environment/voltmon <index>_in<index>_input</index></index>             |  |  |  |
|-----------------|-------------------|--|--|--|--|
| Description     | Get raw voltage i | Get raw voltage input from system  |  |  |  |
| Access          | Read only         | Read only  |  |  |  |
| Release version | 1.0               | 1.0  |  |  |  |
| Arguments       | Name              | Name Data type Values  |  |  |  |
|                 | Voltage           | Voltage Integer X  |  |  |  |
| Example         | •                 | Get voltage monitor 1 input reading: cat \$bsp_path/environment/voltmon1_in1_input |  |  |  |

#### 3.3.7 **Get System Voltage Power**

| Node name       | \$bsp_path/environment   | \$bsp_path/environment/voltmon <index>_power<index>_input</index></index> |  |  |
|-----------------|--|---|--|--|
| Description     | Get raw voltage input fr   | Get raw voltage input from system   |  |  |
| Access          | Read only  | Read only   |  |  |
| Release version | 1.0  | 1.0   |  |  |
| Arguments       | Name   | Name Data type Values   |  |  |
|                 | Voltage Integer X  |   |  |  |
| Example         | Get voltage monitor 1 power reading: cat \$bsp_path/environment/voltmon1_power2_ input |   |  |  |

#### 3.4 Events

## 3.4.1 Get FAN hot-plug event status

| Node name       | \$bsp_path/  | events/fan <index></index>                                      |        |  |
|-----------------|--|---|--------|--|
| Description     | Get hot-plu  | Get hot-plug event status of FAN <index></index>                |        |  |
|                 | Index max  | value corresponds to  |        |  |
|                 | \$bsp_path/  | config/hotplug_fans   |        |  |
|                 | 0 – FAN <ino< td=""><td colspan="3">0 – FAN<index> was removed, 1 – FAN<index> was</index></index></td></ino<> | 0 – FAN <index> was removed, 1 – FAN<index> was</index></index> |        |  |
|                 | iliserteu.   | inserted.   |        |  |
| Access          | Read   | Read  |        |  |
| Release version | V.7.0010.13  | V.7.0010.1300   |        |  |
| Arguments       | Name   | Data type   | Values |  |
|                 | Thermal  | Integer   | 0/1    |  |
| Example         | Get FAN3 h   | Get FAN3 hot-plug status:                                       |        |  |
|                 | cat \$bsp_pa   | cat \$bsp_path/events/fan3                                      |        |  |

#### 3.4.2 **Get PSU hot-plug event status**

| Node name       | \$bsp_path/   | events/psu <index></index> |        |  |
|-----------------|---|----------------------------|--------|--|
| Description     | Get hot-plug event status of PSU <index> Index max value corresponds to \$bsp_path/config/hotplug_psus 0 - PSU<index> was removed, 1 - PSU<index> was inserted.</index></index></index> |                            |        |  |
| Access          | Read  | Read                       |        |  |
| Release version | V.7.0010.1300   |                            |        |  |
| Arguments       | Name  | Data type                  | Values |  |
|                 | Thermal   | Integer                    | 0/1    |  |
| Example         | Get PSU2 hot-plug status:<br>cat \$bsp_path/events/psu2   |                            |        |  |

### 3.4.3 PWR hot-plug event status

|           | <u> </u>                              |
|-----------|---------------------------------------|
|           |                                       |
| Node name | \$bsp_path/events/pwr <index></index> |

| Description     | Get latest hot-plug event status of PWR <index> Index max value corresponds to \$bsp_path/config/hotplug_pwrs 0 - PWR<index> cable was plugged-out, 1 - PWR<index> cable was plugged-in.</index></index></index> |                       |     |  |
|-----------------|--|-----------------------|-----|--|
| Access          | Read   | Read                  |     |  |
| Release version | V.7.0010.13  | V.7.0010.1300         |     |  |
| Arguments       | Name   | Name Data type Values |     |  |
|                 | Thermal  | Integer               | 0/1 |  |
| Example         | Get Power1 cable hot-plug status: cat \$bsp_path/events/pwr1   |                       |     |  |

#### 3.4.4 **DPU Ready event**

| Node name       | \$bsp_path | \$bsp_path/events/dpu[14]_ready |     |  |
|-----------------|------------|---------------------------------|-----|--|
| Description     | Get dpu re | Get dpu ready event             |     |  |
| Access          | Read       | Read                            |     |  |
| Release version | V.7.0030.4 | V.7.0030.4000                   |     |  |
| Arguments       | Name       | Name Data type Values           |     |  |
|                 | dpu        | Integer                         | 0/1 |  |
| Example         | Get dpu[1  | Get dpu[14] ready status        |     |  |
|                 | cat        |                                 |     |  |
|                 | Şbsp_path  | \$bsp_path/events/dpu[14]_ready |     |  |

#### 3.4.5 **DPU Shutdown event**

| Node name   | \$bsp_path/events/dpu[14]_shtdn_ready |
|-------------|---------------------------------------|
| Description | Get dpu shutdown ready event          |
| Access      | Read                                  |

| Release version | V.7.0030.4000 |   |        |
|-----------------|---------------|---|--------|
| Arguments       | Name          | Data type                                   | Values |
|                 | dpu           | Integer                                     | 0/1    |
| Example         | status        | 4] shut down ready<br>events/dpu[14]_shtdn_ |        |

#### **3.5 PSU FW**

## 3.5.1 Get Secondary FW version of PSU

| Node name       | \$bsp_path/firmware/psu <index>_fw_ver</index>   |        |  |  |
|-----------------|--|--------|--|--|
| Description     | Get secondary FW version of PSU <index> For Murata 1500/2000 and Delta 550 the contents of the file is the relevant FW version For all other PSUs - the contents is string "N/A"</index> |        |  |  |
| Access          | Read   |        |  |  |
| Release version | V.7.0020.2000  |        |  |  |
| Arguments       | Name Data type Values  |        |  |  |
|                 | version  | string |  |  |
| Example         | Get secondary FW version of PSU1 \$bsp_path/ firmware/psu1_fw_ver  |        |  |  |

## 3.5.2 **Get Primary FW version of PSU**

| Node name       | \$bsp_path/firmware/psu <index>_fw_primary_ver</index>                    |  | Node<br>name       |
|-----------------|---|--|--------------------|
| Description     | Primary file  | Get primary FW version of PSU <index> Primary files exist only for Murata. For all other PSUs - the contents is string "N/A"</index> |                    |
| Access          | Read  |  | Access             |
| Release version | V.7.0020.2000   |  | Release<br>version |
| Arguments       | Name  | Arguments  | Values             |
|                 | version   | string   |                    |
| Example         | Get primary FW version of PSU1  \$bsp_path/ firmware/psu1_fw_primary_ve r |  |                    |

## 3.6 **DPU** system attributes

#### 3.6.1 **Get DPU id**

| Node name       | \$bsp_path/dpu{n}/sy                | \$bsp_path/dpu{n}/system/dpu_id |        |  |
|-----------------|-------------------------------------|---------------------------------|--------|--|
| Description     | Read dpu{n} id                      | Read dpu{n} id                  |        |  |
| Access          | Read                                | Read                            |        |  |
| Release version | 1.0                                 | 1.0                             |        |  |
| Arguments       | Name                                | Data type                       | Values |  |
|                 | dpu                                 | Integer                         | X      |  |
| Example         | Read dpu{n} id cat \$bsp_path/dpu{n | }/system/dpu_id                 |        |  |

#### 3.6.2 Get DPU boot progress

| Node name       | \$bsp_path/dpu{n}/system/boot_progress                                |           |        |  |
|-----------------|---|-----------|--------|--|
| Description     | Read dpu{n} boot progress   |           |        |  |
| Access          | Read  | Read      |        |  |
| Release version | 1.0   |           |        |  |
| Arguments       | Name  | Data type | Values |  |
|                 | dpu   | Integer   | 0/1    |  |
| Example         | Read dpu{n} boot progress cat \$bsp_path/dpu{n}/system/boot_preogress |           |        |  |

#### 3.6.3 Get DPU cpld version

| Node name       | \$bsp_path/dpu{n}/system/cpld                              |           |                 |  |
|-----------------|--|-----------|-----------------|--|
| Description     | Read dpu{n} cpd version                                    |           |                 |  |
| Access          | Read   | Read      |                 |  |
| Release version | 1.0  |           |                 |  |
| Arguments       | Name   | Data type | Values          |  |
|                 | dpu  | Integer   | XXXXX XXXX XXXX |  |
| Example         | Read dpu{n} cpld version cat \$bsp_path/dpu{n}/system/cpld |           |                 |  |

## 3.6.4 Get DPU cpld base version

| Node name | \$bsp_path/dpu{n}/system/cpld_base |
|-----------|------------------------------------|
|-----------|------------------------------------|

| Description     | Read dpu{n} cpl | Read dpu{n} cpld base version  |                |  |
|-----------------|-----------------|--|----------------|--|
| Access          | Read            | Read   |                |  |
| Release version | 1.0             | 1.0  |                |  |
| Arguments       | Name            | Name Data type Values  |                |  |
|                 | dpu             | Integer  | XXXX XXXX XXXX |  |
| Example         |                 | Read dpu{n} cpld base version cat \$bsp_path/dpu{n}/system/cpld_base |                |  |

#### 3.6.5 Get DPU auxiliary power reset reason

| Node name       | \$bsp_path/dpu{n}/system/reset_aux_pwr_or_reload  |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read dpu{n} reset reaso   | Read dpu{n} reset reason auxiliary power |  |  |
| Access          | Read  | Read                                     |  |  |
| Release version | 1.0   | 1.0                                      |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | dpu Integer 0/1   |  |  |  |
| Example         | Read dpu{n} reset reason auxiliary power cat \$bsp_path/dpu{n}/system/reset_aux_pwr_or_reload |  |  |  |

#### 3.6.6 Get DPU main board reset reason

| Node name       | \$bsp_path/dpu{n}/system/ reset_from_main_board  |         |     |  |
|-----------------|--|---------|-----|--|
| Description     | Read dpu{n} main board reset reason  |         |     |  |
| Access          | Read   | Read    |     |  |
| Release version | 1.0  |         |     |  |
| Arguments       | Name Data type Values  |         |     |  |
|                 | dpu  | Integer | 0/1 |  |
| Example         | Read dpu{n} main board reset reason cat \$bsp_path/dpu{n}/system/reset_from_main_board |         |     |  |

## 3.6.7 **Get DPU comex power failure**

| Node name       | \$bsp_path/dpu{n}/system/reset_comex_pwr_fail    |
|-----------------|--|
| Description     | Read dpu{n} reset reason for comex power failure |
| Access          | Read   |
| Release version | 1.0  |

| Arguments | Name   | Data type | Values |
|-----------|--|-----------|--------|
|           | dpu  | Integer   | 0/1    |
| Example   | Read dpu{n} id cat \$bsp_path/dpu{n}/system/reset_comex_pwr_fail |           |        |

#### 3.6.8 **Get DPU power reset reason**

| Node name       | \$bsp_path/dpu{i                | \$bsp_path/dpu{n}/system/reset_pwr_off                    |  |  |  |
|-----------------|---------------------------------|---|--|--|--|
| Description     | Read dpu{n} rese                | Read dpu{n} reset reason for power off                    |  |  |  |
| Access          | Read                            | Read  |  |  |  |
| Release version | 1.0                             | 1.0   |  |  |  |
| Arguments       | Name                            | Name Data type Values                                     |  |  |  |
|                 | dpu                             | dpu Integer 0/1   |  |  |  |
| Example         | Read dpu{n} id cat \$bsp_path/d | Read dpu{n} id cat \$bsp_path/dpu{n}/system/reset_pwr_off |  |  |  |

#### 3.6.9 Get DPU thermal shutdown reason

| Node name       | \$bsp_path/dpu{n}/system/reset_dpu_thermal   |   |  |  |
|-----------------|--|---|--|--|
| Description     | Read dpu{n} thermal sh   | Read dpu{n} thermal shutdown reset reason |  |  |
| Access          | Read   |   |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name Data type Values  |   |  |  |
|                 | dpu Integer 0/1  |   |  |  |
| Example         | Read dpu{n} thermal shutdown reset reason cat \$bsp_path/dpu{n}/system/reset_dpu_thermal |   |  |  |

#### 3.6.10 **Get DPU tpm reset reason**

| Node name       | \$bsp_path/dpu{n}/system/tpm_rst                                  |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read dpu{n} tpm reset reason                                      |  |  |  |
| Access          | Read  |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | dpu Integer 0/1   |  |  |  |
| Example         | Read dpu{n} tpm reset reason cat \$bsp_path/dpu{n}/system/tpm_rst |  |  |  |

#### 3.6.11 **Get DPU perst reset reason**

| Node name   | \$bsp_path/dpu{n}/system/perst_rst |
|-------------|------------------------------------|
| Description | Read dpu{n} PERST signal to asic   |
| Access      | Read                               |

| Release version | 1.0   |         |   |
|-----------------|---|---------|---|
| Arguments       | Name Data type Values   |         |   |
|                 | dpu   | Integer | X |
| Example         | Read dpu{n} PERST signal to asic cat \$bsp_path/dpu{n}/system/perst_rst |         |   |

## 3.6.12 **Get DPU phy reset reason**

| Node name       | \$bsp_path/dpu{n}/system/phy_rst                                  |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read dpu{n} phy reset reason                                      |  |  |  |
| Access          | Read  |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | dpu Integer 0/1   |  |  |  |
| Example         | Read dpu{n} phy reset reason cat \$bsp_path/dpu{n}/system/phy_rst |  |  |  |

#### 3.6.13 **Get DPU usb phy reset reason**

| Node name       | \$bsp_path/dpu{n}/system/usbphy_rst                                      |  |  |  |
|-----------------|--|--|--|--|
| Description     | Read dpu{n} usb phy reset reason   |  |  |  |
| Access          | Read   |  |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name Data type Values  |  |  |  |
|                 | dpu Integer X  |  |  |  |
| Example         | Read dpu{n} usb phy reset reason cat \$bsp_path/dpu{n}/system/usbphy_rst |  |  |  |

## 3.6.14 **Get DPU fpga part number**

| Node name       | \$bsp_path/dpu{n}/system/fpga1_pn |           |        |
|-----------------|-----------------------------------|-----------|--------|
| Description     | Read dpu{n} fpga part number      |           |        |
| Access          | Read                              |           |        |
| Release version | 1.0                               |           |        |
| Arguments       | Name                              | Data type | Values |

|         | dpu  | Integer | X  |
|---------|--|---------|----|
| Example | Read dpu{n} fpga part nu<br>cat \$bsp_path/dpu{n}/sy |         | om |

## 3.6.15 **Get DPU fpga minor version**

| Node name       | \$bsp_path/dpu{n}/system/fpga1_version_min                                    |  |  |
|-----------------|---|--|--|
| Description     | Read dpu{n} minor version   |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | dpu Integer X   |  |  |
| Example         | Read dpu{n} fpga minor version cat \$bsp_path/dpu{n}/system/fpga1_version_min |  |  |

#### 3.6.16 **Get DPU ufm upgrade status**

| Node resea      | Alexander (1) (1) (1) (1) (1) (1) (1) (1) (1)                           |  |  |
|-----------------|---|--|--|
| Node name       | \$bsp_path/dpu{n}/system/ufm_upgrade                                    |  |  |
| Description     | Read dpu{n} ufm upgrade status  |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | dpu Integer 0/1   |  |  |
| Example         | Read dpu{n} ufm upgrade status cat \$bsp_path/dpu{n}/system/ufm_upgrade |  |  |

#### 3.6.17 **Get DPU VR update status**

| Node name       | \$bsp_path/dpu{n}/system/voltreg_update_status |     |  |  |
|-----------------|--|-----|--|--|
| Description     | Read dpu{n} VR update status                   |     |  |  |
| Access          | Read   |     |  |  |
| Release version | 1.0  | 1.0 |  |  |
| Arguments       | Name Data type Values                          |     |  |  |
|                 | dpu Integer 0/1                                |     |  |  |

| Example | Read dpu{n} VR update status                       |
|---------|--|
|         | cat \$bsp_path/dpu{n}/system/voltreg_update_status |

#### 3.7 DPU events

#### 3.7.1 Get DPU PLL power good indication

| Node name       | \$bsp_path/dpu{n}/system/pg_1v8  |  |  |  |
|-----------------|--|--|--|--|
| Description     | Read dpu{n} PLL power good indication                                      |  |  |  |
| Access          | Read   |  |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name Data type Values  |  |  |  |
|                 | dpu Integer 0/1  |  |  |  |
| Example         | Read dpu{n} PLL power good indication: cat \$bsp_path/dpu{n}/events/pg_1v8 |  |  |  |

#### 3.7.2 Get DPU input power indication

| Node name       | \$bsp_path/dpu{n}/system/pg_comparator   |  |  |
|-----------------|--|--|--|
| Description     | Read dpu{n} 12V input power good indication  |  |  |
| Access          | Read   |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | dpu Integer 0/1  |  |  |
| Example         | Read dpu{n} DPU 12V input power good indication cat \$bsp_path/dpu{n}/events/pg_comparator |  |  |

#### 3.7.3 Get DPU serdes power indication

| Node name       | \$bsp_path/dpu{n}/system/pg_dvdd              |  |  |
|-----------------|---|--|--|
| Description     | Read dpu{n} serdes core power good indication |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values                         |  |  |
|                 | dpu Integer 0/1                               |  |  |

| Example | Read dpu{n} serdes core power good indication: |
|---------|--|
| ·       | cat \$bsp_path/dpu{n}/events/pg_dvdd           |

#### 3.7.4 Get DPU serdes analog power indication

| Node name       | \$bsp_path/dpu{n}/system/pg_hvdd  |  |  |
|-----------------|---|--|--|
| Description     | Read dpu{n} serdes analog power good indication                                       |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | dpu Integer 0/1   |  |  |
| Example         | Read dpu{n} serdes analog power good indication: cat \$bsp_path/dpu{n}/events/pg_hvdd |  |  |

#### 3.7.5 Get DPU core power indication

| Node name       | \$bsp_path/dpu{n}/system/pg_vdd   |  |  |
|-----------------|---|--|--|
| Description     | Read dpu{n} core power good indication                                      |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | dpu Integer 0/1   |  |  |
| Example         | Read dpu{n} core power good indication: cat \$bsp_path/dpu{n}/events/pg_vdd |  |  |

#### 3.7.6 **Get DPU cpu power indication**

| Node name       | \$bsp_path/dpu{n}/system/pg_vdd_cpu  |                       |  |  |
|-----------------|--|-----------------------|--|--|
| Description     | Read dpu{n} CPU power good indication  |                       |  |  |
| Access          | Read   | Read                  |  |  |
| Release version | 1.0  | 1.0                   |  |  |
| Arguments       | Name   | Name Data type Values |  |  |
|                 | dpu Integer 0/1  |                       |  |  |
| Example         | Read dpu{n} CPU power good indication: cat \$bsp_path/dpu{n}/events/pg_vdd_cpu |                       |  |  |

#### 3.7.7 Get DPU digital interfaces power

| Node name       | \$bsp_path/dpu{n}/system/pg_vddio                    |  |  |  |  |
|-----------------|--|--|--|--|--|
| Description     | Read dpu{n} digital interfaces power good indication |  |  |  |  |
| Access          | Read   |  |  |  |  |
| Release version | 1.0  |  |  |  |  |
| Arguments       | dpu  |  |  |  |  |

|         | dpu  | Integer | 0/1 |
|---------|--|---------|-----|
| Example | Read dpu{n} digital interf<br>cat \$bsp_path/dpu{n}/ev |         |     |

#### 3.7.8 Get DPU ddr5 power indication

| Node name       | \$bsp_path/dpu{n}/syst | \$bsp_path/dpu{n}/system/pg_vddq   |  |  |
|-----------------|------------------------|--|--|--|
| Description     | Read dpu{n} DDR5 pow   | Read dpu{n} DDR5 power good indication                                       |  |  |
| Access          | Read                   | Read   |  |  |
| Release version | 1.0                    | 1.0  |  |  |
| Arguments       | Name                   | Name Data type Values  |  |  |
|                 | dpu                    | dpu Integer 0/1  |  |  |
| Example         |                        | Read dpu{n} DDR5 power good indication: cat \$bsp_path/dpu{n}/events/pg_vddq |  |  |

#### 3.7.9 **Get DPU thermal trip indication**

| Node name       | \$bsp_path/dpu{n}/system/thermal_trip |   |  |  |
|-----------------|---------------------------------------|---|--|--|
| Description     | Read dpu{n} thermal trip signal       |   |  |  |
| Access          | Read                                  |   |  |  |
| Release version | 1.0                                   |   |  |  |
| Arguments       | Name Data type Values                 |   |  |  |
|                 | dpu Integer 0/1                       |   |  |  |
| Example         |                                       | Read dpu{n} thermal trip indication:  cat \$bsp_path/dpu{n}/events/thermal_trip |  |  |

## 3.7.10 Get DPU tps upgrade status

| Node name       | \$bsp_path/dpu{n}/system/ufm_upgrade_done                    |   |  |  |
|-----------------|--|---|--|--|
| Description     | Read dpu{n} TPS upgrade process finished successfully or not |   |  |  |
| Access          | Read   | Read  |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name Data type Values  |   |  |  |
|                 | dpu Integer 0/1  |   |  |  |
| Example         |  | Read dpu{n} TPS upgrade process finished successfully or not: cat \$bsp_path/dpu{n}/events/ufm_upgrade_done |  |  |

## 3.7.11 Get DPU cpu power fault indication

| Node name | \$bsp_path/dpu{n}/system/vdd_cpu_alert |
|-----------|--|
|-----------|--|

| Description     | Read dpu{n} cpu power fault indication  |  |  |  |
|-----------------|---|--|--|--|
| Access          | Read  |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | dpu Integer 0/1   |  |  |  |
| Example         | Read dpu{n} cpu power fault indication cat \$bsp_path/dpu{n}/events/vdd_cpu_alert |  |  |  |

#### 3.7.12 Get DPU cpu VR hot alert

| Node name       | \$bsp_path/dpu{n}/system/vdd_cpu_hot_alert                                    |  |  |
|-----------------|---|--|--|
| Description     | Read dpu{n} cpu VR hot alert  |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | dpu Integer 0/1   |  |  |
| Example         | Read dpu{n} cpu VR hot alert:  cat \$bsp_path/dpu{n}/events/vdd_cpu_hot_alert |  |  |

#### 3.7.13 Get DPU ddr5 fault indication

| Node name       | \$bsp_path/dpu{n}/system/vddq_alert |   |  |  |
|-----------------|-------------------------------------|---|--|--|
| Description     | Read dpu{n} DDR5 fault indication   |   |  |  |
| Access          | Read                                |   |  |  |
| Release version | 1.0                                 |   |  |  |
| Arguments       | Name Data type Values               |   |  |  |
|                 | dpu Integer 0/1                     |   |  |  |
| Example         | •                                   | Read dpu{n} DDR5 fault indication cat \$bsp_path/dpu{n}/events/vddq_alert |  |  |

#### 3.7.14 Get DPU ddr5 hot alert

| Node name       | \$bsp_path/dpu{n}/system/vddq_hot_alert |   |  |  |
|-----------------|---|---|--|--|
| Description     | Read dpu{n} DDR5 VR hot alert           |   |  |  |
| Access          | Read                                    |   |  |  |
| Release version | 1.0                                     |   |  |  |
| Arguments       | Name Data type Values                   |   |  |  |
|                 | dpu Integer 0/1                         |   |  |  |
| Example         |   | Read dpu{n} DDR5 VR hot alert:  cat \$bsp_path/dpu{n}/events/vddq_hot_alert |  |  |

## 3.8 LC Alarms

## 3.8.1 Get LC Hot Swap Power Alarm

| Node name       | \$bsp_path/lc{n}/alarm/h  | \$bsp_path/lc{n}/alarm/hotswap_power <index>_alarm</index>                       |  |  |
|-----------------|---|--|--|--|
| Description     | Read lc <index> hotswap</index>   | Read Ic <index> hotswap power <index> alarm, alarm set on (1, 0)</index></index> |  |  |
| Access          | Read  | Read   |  |  |
| Release version | 1.0   | 1.0  |  |  |
| Arguments       | Name  | Name Data type Values  |  |  |
|                 | Thermal Integer 0 / 1   |  |  |  |
| Example         | Read lc1 hotswap power 1 alarm: cat \$bsp_path/lc1/alarm/hotswap_power1_alarm |  |  |  |

# 3.8.2 **Get LC Voltage Input Alarm**

| Node name       | \$bsp_path/lc{n}/alarm/voltmon <index>_in<index>_alarm</index></index>                    |      |  |  |
|-----------------|---|------|--|--|
| Description     | Read Ic <index> Voltage<index> Input <index> alarm, set on (1, 0)</index></index></index> |      |  |  |
| Access          | Read  | Read |  |  |
| Release version | 1.0   | 1.0  |  |  |
| Arguments       | Name Data type Values   |      |  |  |
|                 | Thermal Integer 0/1   |      |  |  |
| Example         | Read lc1 Voltage 1 Input 3 alarm cat \$bsp_path/lc1/alarm/voltmon1_in3_alarm              |      |  |  |

## 3.8.3 **Get LC Voltage Current Alarm**

| Node name       | \$bsp_path/lc{n}/alarm/voltmon <index>_curr<index>_alarm</index></index>                    |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read Ic <index> Voltage<index> Current <index> alarm, set on (1, 0)</index></index></index> |  |  |  |
| Access          | Read  |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | Thermal Integer 0/1   |  |  |  |
| Example         | Read lc1 Voltage 1 current 3 alarm cat \$bsp_path/lc1/alarm/voltmon1_curr3_alarm            |  |  |  |

## 3.8.4 **Get LC Voltage Power Alarm**

| Node name       | \$bsp_path/lc{n}/alarm/voltmon <index>_power<index>_alarm</index></index>                |  |  |  |
|-----------------|--|--|--|--|
| Description     | Read Ic <index> Voltage<index> Power<index> alarm, set on (1, 0)</index></index></index> |  |  |  |
| Access          | Read   |  |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name Name  |  |  |  |
|                 | Thermal Thermal  |  |  |  |
| Example         | Read lc1 Voltage 1 power 1 alarm: cat \$bsp_path/lc1/alarm/voltmon1_power1_alarm         |  |  |  |

## 3.9 LC EEPROM

#### 3.9.1 Read LC EEPROM FRU

| Node name       | \$bsp_path/lc{n}/eeprom/fru                                    |   |  |  |
|-----------------|--|---|--|--|
| Description     | Read lc <index> eeprom</index>                                 | Read Ic <index> eeprom hexdump of fru</index> |  |  |
| Access          | Read   | Read  |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name   | Name Data type Values                         |  |  |
|                 | EEPROM information Hex Hex dump format of memory               |   |  |  |
| Example         | Read lc1 eeprom hexdump of fru : cat \$bsp_path/lc1/eeprom/fru |   |  |  |

#### 3.9.2 Read LC EEPROM INI

| Node name       | \$bsp_path/lc{n}/eeprom/ini                                    |   |  |  |
|-----------------|--|---|--|--|
| Description     | Read lc <index> eeprom</index>                                 | Read Ic <index> eeprom hexdump of ini</index> |  |  |
| Access          | Read   | Read  |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name Data type Values  |   |  |  |
|                 | EEPROM information Hex Hex dump format of memory               |   |  |  |
| Example         | Read lc1 eeprom hexdump of ini : cat \$bsp_path/lc1/eeprom/ini |   |  |  |

#### 3.9.3 Read LC EEPROM VPD Parsed

| Node name       | \$bsp_path/lc{n}/eepron        | \$bsp_path/lc{n}/eeprom/vpd_parsed                                |  |  |  |
|-----------------|--------------------------------|---|--|--|--|
| Description     | Read lc <index> eeprom</index> | Read Ic <index> eeprom vpd parsed</index>                         |  |  |  |
| Access          | Read                           | Read  |  |  |  |
| Release version | 1.0                            | 1.0   |  |  |  |
| Arguments       | Name                           | Name Data type Values   |  |  |  |
|                 | EEPROM information             | EEPROM information text text format of memory                     |  |  |  |
| Example         | ·                              | Read lc1 eeprom ini parsed : cat \$bsp_path/lc1/eeprom/vpd_parsed |  |  |  |

#### 3.9.4 Read LC EEPROM INI Parsed

| Node name       | \$bsp_path/lc{n}/eeprom/ini_parsed                                |   |  |  |
|-----------------|---|---|--|--|
| Description     | Read lc <index> eeprom i</index>                                  | Read lc <index> eeprom ini parsed</index> |  |  |
| Access          | Read  |   |  |  |
| Release version | 1.0   |   |  |  |
| Arguments       | Name Data type Values   |   |  |  |
|                 | EEPROM information text text format of memory                     |   |  |  |
| Example         | Read lc1 eeprom ini parsed : cat \$bsp_path/lc1/eeprom/ini_parsed |   |  |  |

## 3.10 LC Environment

#### 3.10.1 **Get LC Voltage Current**

| Node name       | \$bsp_path/lc{n}/          | \$bsp_path/lc{n}/environment/voltmon <index>_curr<index>_input</index></index>                   |  |  |  |
|-----------------|----------------------------|--|--|--|--|
| Description     | Get lc <index> rav</index> | Get lc <index> raw voltage current <index> input</index></index>                                 |  |  |  |
| Access          | Read only                  | Read only  |  |  |  |
| Release version | 1.0                        | 1.0  |  |  |  |
| Arguments       | Name                       | Name Data type Values  |  |  |  |
|                 | Voltage                    | Voltage Integer X  |  |  |  |
| Example         |                            | Get lc1 voltage monitor 1 current 2 reading: cat \$bsp_path/lc1/environment/voltmon1_curr2_input |  |  |  |

#### 3.10.2 **Get LC Voltage Input**

| Node name       | \$bsp_path/lc{n}/          | \$bsp_path/lc{n}/environment/voltmon <index>_in<index>_input</index></index>                 |  |  |  |
|-----------------|----------------------------|--|--|--|--|
| Description     | Get lc <index> rav</index> | Get lc <index> raw voltage input<index></index></index>                                      |  |  |  |
| Access          | Read only                  | Read only  |  |  |  |
| Release version | 1.0                        | 1.0  |  |  |  |
| Arguments       | Name                       | Name Data type Values  |  |  |  |
|                 | Voltage                    | Voltage Integer X  |  |  |  |
| Example         | •                          | Get lc1 voltage monitor 1 input 1 reading: cat \$bsp_path/lc1/environment/voltmon1_in1_input |  |  |  |

#### 3.10.3 **Get LC Voltage Power**

| Node name       | \$bsp_path/lc{n}/          | \$bsp_path/lc{n}/environment/voltmon <index>_power<index>_input</index></index>                  |  |  |
|-----------------|----------------------------|--|--|--|
| Description     | Get lc <index> rav</index> | Get lc <index> raw voltage power<index> input</index></index>                                    |  |  |
| Access          | Read only                  | Read only  |  |  |
| Release version | 1.0                        | 1.0  |  |  |
| Arguments       | Name                       | Name Data type Values  |  |  |
|                 | Voltage                    | Voltage Integer X  |  |  |
| Example         | •                          | Get lc1 voltage monitor 1 power 2 reading: cat \$bsp_path/lc1/environment/voltmon1_power2_ input |  |  |

#### 3.10.4 **Get LC Hot Swap Current**

| Node name       | \$bsp_path/lc{n}/environment/hotswap_curr <index>_input</index>  |   |  |  |
|-----------------|--|---|--|--|
| Description     | Get lc <index> raw hotswap current <index> input</index></index> |   |  |  |
| Access          | Read only  |   |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name Data type Values  |   |  |  |
|                 | Voltage Integer X  |   |  |  |
| Example         | •  | Get lc1 hotswap current 1 reading: cat \$bsp_path/lc1/environment/hotswap_curr1_input |  |  |

#### 3.10.5 **Get LC Hot Swap Input**

| Node name   | \$bsp_path/lc{n}/environment/hotswap_in <index>_input</index> |
|-------------|---|
| Description | Get Ic <index> raw hotswap input<index></index></index>       |
| Access      | Read only   |

| Release version | 1.0   |         |   |
|-----------------|---|---------|---|
| Arguments       | Name Data type Values   |         |   |
|                 | Voltage   | Integer | Х |
| Example         | Get lc1 hotswap input 1 reading: cat \$bsp_path/lc1/environment/hotswap_in1_input |         |   |

#### 3.10.6 **Get LC Hot Swap Power**

| Node name       | \$bsp_path/lc{n}/          | \$bsp_path/lc{n}/environment/hotswap_power <index>_input</index>                     |  |  |
|-----------------|----------------------------|--|--|--|
| Description     | Get lc <index> rav</index> | Get lc <index> raw hotswap power<index> input</index></index>                        |  |  |
| Access          | Read only                  | Read only  |  |  |
| Release version | 1.0                        | 1.0  |  |  |
| Arguments       | Name                       | Name Data type Values  |  |  |
|                 | Voltage                    | Voltage Integer X  |  |  |
| Example         | •                          | Get lc1 hotswap power 1 reading: cat \$bsp_path/lc1/environment/hotswap_power1_input |  |  |

## 3.10.7 **Get LC A2D Voltage**

| Node name       | \$bsp_path/lc{n}/          | \$bsp_path/lc{n}/environment/a2d_iio:device <number>_raw<index></index></number>          |  |  |
|-----------------|----------------------------|---|--|--|
| Description     | Get lc <index> rav</index> | Get lc <index> raw voltage input <index> from A2D sensor<number></number></index></index> |  |  |
| Access          | Read only                  | Read only   |  |  |
| Release version | 1.0                        | 1.0   |  |  |
| Arguments       | Name                       | Name Data type Values   |  |  |
|                 | Voltage                    | Voltage Integer X   |  |  |
| Example         | _                          | Get lc1 voltage input 0 from A2D1: cat \$bsp_path/lc1/environment/a2d_iio:device0_raw_1   |  |  |

## 3.10.8 Get LC A2D Voltage Scale

| Node name       | \$bsp_path/lc{n}/environment/device <number>_voltage_scale</number>    |  |  |
|-----------------|--|--|--|
| Description     | Get lc <index> voltage scale from A2D sensor <number></number></index> |  |  |
| Access          | Read only  |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | Voltage Integer X  |  |  |

| Example | Get lc1 voltage scale 0 from A2D:                    |
|---------|--|
|         | cat \$bsp_path/lc1/environment/device0_voltage_scale |

#### **3.11 LC LED**

#### 3.11.1 Get LC Status LED

| Node name       | \$bsp_path/lc{n}/led/led_status                                   |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read Ic <index> status m</index>                                  | Read lc <index> status module status LED</index> |  |  |
| Access          | Read  | Read   |  |  |
| Release version | 1.0   | 1.0  |  |  |
| Arguments       | Name  | Name Data type Values                            |  |  |
|                 | LED color Integer none; green; green_blink; orange; orange_blink; |  |  |  |
| Example         | Get lc1 status LED color: cat \$bsp_path/lc1/led/led_status       |  |  |  |

## 3.11.2 **Get LC Status LED Capabilities**

| Node name       | \$bsp_path/lc{n}/led/led_status_capability                                    |  |  |  |
|-----------------|---|--|--|--|
| Description     | Read Ic <index> status module status LED capabilities</index>                 |  |  |  |
| Access          | Read only   |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | LED capabilities  Integer  green_blink orange_blink green orange none         |  |  |  |
| Example         | Get lc1 status LED capabilities: cat \$bsp_path/lc1/led/led_status_capability |  |  |  |

#### 3.11.3 Set LC Status Green/Orange

| Node name   | \$bsp_path/lc{n}/led/led_status_ <color></color> |
|-------------|--|
| Description | Set lc <index> status LED active</index>         |
| Access      | Read/Write                                       |

| Release version | 1.0   |         |  |
|-----------------|---|---------|--|
| Arguments       | Name Data type Values   |         |  |
|                 | LED capabilities  | Integer |  |
| Example         | Set lc1 status led active: echo 255 > \$bsp_path/lc1/led/led_status_green |         |  |

## 3.11.4 Set LC Status LED Green/Orange Delay Off

| Node name       | \$bsp_path/lc{n}/led_status_ <color>_delay_off</color>   |  |  |  |  |
|-----------------|--|--|--|--|--|
| Description     | Set lc <index> status LED</index>  | Set lc <index> status LED blinking off frequency</index> |  |  |  |
| Access          | Read/Write   | Read/Write   |  |  |  |
| Release version | 1.0  | 1.0  |  |  |  |
| Arguments       | Name   | Name Data type Values                                    |  |  |  |
|                 | LED capabilities Integer   |  |  |  |  |
| Example         | Set lc1 status led green delay off:<br>echo 10 > \$bsp_path/lc1/led/led_status_green_delay_off |  |  |  |  |

#### 3.11.5 Set LC Status LED Green/Orange Delay On

| Node name       | \$bsp_path/lc{n}/led/led_status_ <color>_delay_on</color>                                     |  |  |  |
|-----------------|---|--|--|--|
| Description     | Set lc <index> status LED blinking on frequency</index>                                       |  |  |  |
| Access          | Read/Write  |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | LED capabilities Integer  |  |  |  |
| Example         | Set lc1 status led green delay on:<br>echo 255 > \$bsp_path/lc1/led/led_status_green_delay_on |  |  |  |

# 3.12 LC Config

#### 3.12.1 Read LC CPLD Number

| Node name       | \$bsp_path/lc{n}/config/cpld_num                     |
|-----------------|--|
| Description     | Get the number of CPLD modules in lc <index></index> |
| Access          | Read only  |
| Release version | 1.0  |

| Arguments | Name  | Data type | Values |
|-----------|---|-----------|--------|
|           | Status  | Integer   | 1-X    |
| Example   | Get lc1 CPLD number: cat \$bsp_path/lc1/config/cpld_num |           |        |

#### 3.12.2 Read LC FPGA Number

| Node name       | \$bsp_path/lc{n}/ | \$bsp_path/lc{n}/config/fpga_num                        |  |  |
|-----------------|-------------------|---|--|--|
| Description     | Get the number    | Get the number of FPGA modules in lc <index></index>    |  |  |
| Access          | Read only         | Read only   |  |  |
| Release version | 1.0               | 1.0   |  |  |
| Arguments       | Name              | Name Data type Values                                   |  |  |
|                 | Status            | Status Integer 1-X                                      |  |  |
| Example         |                   | Get lc1 FPGA number: cat \$bsp_path/lc1/config/fpga_num |  |  |

#### 3.12.3 Read LC Gearbox Number

| Node name       | \$bsp_path/lc{n}/config/gearbox_num                           |  |  |
|-----------------|---|--|--|
| Description     | Get the number of gearbox modules in lc <index></index>       |  |  |
| Access          | Read only   |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | Status Integer 1-X  |  |  |
| Example         | Get lc1 gearbox number: cat \$bsp_path/lc1/config/gearbox_num |  |  |

#### 3.12.4 **Read LC Gearbox Manager Number**

| Node name       | \$bsp_path/lc{n}/config/gearbox_mgr_num                         |  |  |
|-----------------|---|--|--|
| Description     | Get the number of gearbox manager modules in lc <index></index> |  |  |
| Access          | Read only   |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |

|         | Status  | Integer | 1-X |
|---------|---|---------|-----|
| Example | Get lc1 gearbox manager cat \$bsp_path/lc1/config |         |     |

#### 3.12.5 **Read LC Port Number**

| Node name       | \$bsp_path/lc{n}/config/port_num                        |           |        |  |
|-----------------|---|-----------|--------|--|
| Description     | Get the number of ports in lc <index></index>           |           |        |  |
| Access          | Read only   | Read only |        |  |
| Release version | 1.0   |           |        |  |
| Arguments       | Name Data type Values                                   |           | Values |  |
|                 | Status  | Integer   | 1-X    |  |
| Example         | Get lc1 port number: cat \$bsp_path/lc1/config/port_num |           |        |  |

#### 3.12.6 Read LC Module Counter

| Node name       | \$bsp_path/lc{n}/module_counter  |   |     |  |
|-----------------|--|---|-----|--|
| Description     | Get the number of sfp modules in lc <index></index>                            |   |     |  |
|                 | Note: this is attribute is v   | Note: this is attribute is valid only for I2C ASIC driver |     |  |
| Access          | Read only  |   |     |  |
| Release version | 1.0  |   |     |  |
| Arguments       | Name Data type Values  |   |     |  |
|                 | Status   | Integer   | 1-X |  |
| Example         | Get the number of sfp modules in lc1: cat \$bsp_path/lc1/config/module_counter |   |     |  |

## 3.13 LC thermal

#### 3.13.1 Read LC Gearbox Temperature Input

| Node name       | \$hsn_nath/lc{n}         | \$bsp_path/lc{n}/thermal/gearbox <index>_temp_input</index> |        |  |
|-----------------|--------------------------|---|--------|--|
|                 |                          |   |        |  |
| Description     | Get lc <index> g</index> | Get lc <index> gearbox<index> temperature</index></index>   |        |  |
| Access          | Read                     | Read  |        |  |
| Release version | 1.0                      | 1.0   |        |  |
| Arguments       | Name                     | Data type   | Values |  |

|         | Thermal   | Integer |  |
|---------|---|---------|--|
| Example | Read lc1 gearbox1 temp cat \$bsp_path/lc1/therm | •       |  |

#### 3.13.2 **Get LC QSFP/SFP Module Thermal**

| Node name       | \$bsp_path/lc{n}/thermal/mlxsw-module <index></index>            |  |  |
|-----------------|--|--|--|
| Description     | Get lc <index> port thermal zones</index>                        |  |  |
| Access          | Folder   |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | Thermal  |  |  |
| Example         | Get lc1 mlxsw module 1: cat \$bsp_path/lc1/thermal/mxlsw-module1 |  |  |

#### 3.13.3 **Read Temperature Critical Module**

| Node name       | \$bsp_path/lc{n}/ther   | \$bsp_path/lc{n}/thermal/module <index>_temp_crit</index>                     |  |  |
|-----------------|---|---|--|--|
| Description     | Get lc <index> port m</index>   | Get lc <index> port module <index> critical temperature level</index></index> |  |  |
| Access          | Read  | Read  |  |  |
| Release version | 1.0   | 1.0   |  |  |
| Arguments       | Name  | Name Data type Values   |  |  |
|                 | Thermal   | Thermal Integer   |  |  |
| Example         | Get lc1 temp critical module 18: cat \$bsp_path/lc1/thermal/module18_temp_crit_ |   |  |  |

#### 3.13.4 Read Temperature Emergency Module

| Node name       | \$bsp_path/lc{n}/t   | \$bsp_path/lc{n}/thermal/module <index>_temp_emergency</index>              |  |  |
|-----------------|--|---|--|--|
| Description     | Get lc <index> po</index>  | Get lc <index> port module <index> critical emergency level</index></index> |  |  |
| Access          | Read   | Read  |  |  |
| Release version | 1.0  | 1.0   |  |  |
| Arguments       | Name   | Name Data type Values   |  |  |
|                 | Thermal  | Thermal Integer   |  |  |
| Example         | Get lc1 temp emergency module 18: cat \$bsp_path/lc1/thermal/module18_temp_emergency |   |  |  |

#### 3.13.5 **Read Temperature Fault Module**

| Node name | \$bsp_path/lc{n}/thermal/module <index>_temp_fault</index> |
|-----------|--|
|-----------|--|

| Description     | Get lc <index> indication of port module<index> is in fault state (1-FAULT, 0-VALID)</index></index> |      |  |  |
|-----------------|--|------|--|--|
| Access          | Read   | Read |  |  |
| Release version | 1.0  |      |  |  |
| Arguments       | Name Data type Values  |      |  |  |
|                 | Thermal Integer  |      |  |  |
| Example         | Get lc1 temp fault module 18: cat \$bsp_path/lc1/thermal/module18_temp_fault                         |      |  |  |

## 3.13.6 **Read Temperature Input Module**

| Node name       | \$bsp_path/lc{n}/thermal/module <index>_temp_input</index>               |  |  |  |
|-----------------|--|--|--|--|
| Description     | Get lc <index> port mo</index>   | Get lc <index> port module <index> temperature</index></index> |  |  |
| Access          | Read   | Read   |  |  |
| Release version | 1.0  | 1.0  |  |  |
| Arguments       | Name   | Name Data type Values  |  |  |
|                 | Thermal Integer  |  |  |  |
| Example         | Get lc1 temp input module 18: cat \$bsp_path/thermal/module18_temp_input |  |  |  |

#### 3.14 LED Control

#### 3.14.1 **Get Fan Status LED**

| Node name       | \$bsp_path/led/led_fan< | \$bsp_path/led/led_fan <fan module="" number=""></fan>          |  |  |
|-----------------|-------------------------|---|--|--|
| Description     | Read/write fan module s | Read/write fan module status LED                                |  |  |
| Access          | Read                    | Read  |  |  |
| Release version | 1.0                     | 1.0   |  |  |
| Arguments       | Name                    | Name Data type Values   |  |  |
|                 | LED color               | Integer   | none; green; green_blink;<br>amber/red; amber_blink/red<br>_blink; |  |
| Example         |                         | Get fan module 1 status LED color: cat \$bsp_path/led/ led_fan1 |  |  |

#### 3.14.2 **Get Fan LED Capabilities**

| Node name | \$bsp_path/led/led_fan <fan module="" number="">_capability</fan> |
|-----------|---|
|-----------|---|

| Description     | Read fan module status LED   |           |  |  |
|-----------------|--|-----------|--|--|
| Access          | Read only  |           |  |  |
| Release version | 1.0  | 1.0       |  |  |
| Arguments       | Name   | Data type | Values   |  |
|                 | LED capabilities   | Integer   | green_blink amber_blink/ red_blink green amber/red; none |  |
| Example         | Get fan module 1 capabilities: cat \$bsp_path/led/ led_fan1_capability |           |  |  |

#### 3.14.3 **Set Fan LED Green/[Amber/Red]**

| Node name       | \$bsp_path/led/led_fan <fan module="" number="">_<color></color></fan> |  |  |
|-----------------|--|--|--|
| Description     | Set fan module status LED active                                       |  |  |
| Access          | Read/Write   |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | LED capabilities Integer   |  |  |
| Example         | Set fan module 1 active:<br>echo 255 > \$bsp_path/led/led_fan1_green   |  |  |

#### 3.14.4 Set Fan LED Green/[Amber/Red] Delay Off

| Node name       | \$bsp_path/led/led_fan <fan module="" number="">_<color>_delay_off</color></fan>          |  |  |
|-----------------|---|--|--|
| Description     | Set fan led blinking off frequency  |  |  |
| Access          | Read/Write  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | LED capabilities Integer  |  |  |
| Example         | Set fan led module 1green delay off:<br>echo 10 > \$bsp_path/led/led_fan1_green_delay_off |  |  |

# 3.14.5 **Set Fan LED Green/[Amber/Red] Delay On**

| Node name   | \$bsp_path/led/led_fan <fan module="" number="">_<color>_delay_on</color></fan> |
|-------------|---|
| Description | Set fan led blinking on frequency   |
| Access      | Read/Write  |

| Release version | 1.0  |           |        |
|-----------------|--|-----------|--------|
| Arguments       | Name   | Data type | Values |
|                 | LED capabilities   | Integer   |        |
| Example         | Set fan module 1 active: echo 255 > \$bsp_path/led/led_fan1_green_delay_on |           |        |

#### 3.14.6 **Get PSU Status LED**

| Node name       | \$bsp_path/led/led_PSU                                      |           |   |  |
|-----------------|---|-----------|---|--|
| Description     | Read/write PSU module status LED                            |           |   |  |
| Access          | Read  | Read      |   |  |
| Release version | 1.0   |           |   |  |
| Arguments       | Name  | Data type | Values  |  |
|                 | LED color   | Integer   | green_blink amber_blink / red_blink green amber/red; none |  |
| Example         | Get PSU module status LED color: cat \$bsp_path/led/led_psu |           |   |  |

#### 3.14.7 **Get PSU LED Capabilities**

| Node name       | \$bsp_path/led/led_p | \$bsp_path/led/led_psu_capability                                   |   |  |
|-----------------|----------------------|---|---|--|
| Description     | Read PSU module sta  | Read PSU module status LED  |   |  |
| Access          | Read only            | Read only   |   |  |
| Release version | 1.0                  | 1.0   |   |  |
| Arguments       | Name                 | Data type   | Values  |  |
|                 | LED capabilities     | Integer   | green_blink amber_blink / red_blink green amber/red; none |  |
| Example         | •                    | Get PSU module capabilities: cat \$bsp_path/led/ led_psu_capability |   |  |

## 3.14.8 **Set PSU LED Green/[Amber/Red]**

| Node name       | \$bsp_path/led/led_psu_ <color></color>                        |  |  |
|-----------------|--|--|--|
| Description     | Set PSU module status LED active                               |  |  |
| Access          | Read/Write   |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | LED capabilities Integer                                       |  |  |
| Example         | Set fan module active: echo 255 > \$bsp_path/led/led_psu_green |  |  |

#### 3.14.9 Set PSU LED Green/[Amber/Red] Delay Off

| Node name       | \$bsp_path/led/led_psu_ <color>_delay_off</color>                                     |  |  |  |
|-----------------|---|--|--|--|
| Description     | Set PSU LED blinking off frequency  |  |  |  |
| Access          | Read/Write  |  |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | LED capabilities Integer  |  |  |  |
| Example         | Set PSU led module 1green delay off: echo 10 > \$bsp_path/led/led_psu_green_delay_off |  |  |  |

#### 3.14.10 Set PSU LED Green/[Amber/Red] Delay On

| Node name       | \$bsp_path/led/led_psu_ <color>_delay_on</color>                             |  |  |  |
|-----------------|--|--|--|--|
| Description     | Set PSU LED blinking on frequency  |  |  |  |
| Access          | Read/Write   |  |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name Data type Values  |  |  |  |
|                 | LED capabilities Integer   |  |  |  |
| Example         | Set PSU module 1 active:<br>echo 255 > \$bsp_path/led/led_psu_green_delay_on |  |  |  |

#### **3.14.11 Get Status LED**

| Node name       | \$bsp_path/led/led/led/led/led/led/led/led/led/led | \$bsp_path/led/led_status     |  |  |  |
|-----------------|--|-------------------------------|--|--|--|
| Description     | Read status mod                                    | Read status module status LED |  |  |  |
| Access          | Read   | Read                          |  |  |  |
| Release version | 1.0  | 1.0                           |  |  |  |
| Arguments       | Name   | Name Data type Values         |  |  |  |

|         | LED color   | Integer | green_blink amber_blink / red_blink green amber/red; none |
|---------|---|---------|---|
| Example | Get status LED color: cat \$bsp_path/led/led_status |         |   |

#### 3.14.12 **Get Status LED Capabilities**

| Node name       | \$bsp_path/led/led_status_capability                                  |         |   |
|-----------------|---|---------|---|
| Description     | Read status module status LED   |         |   |
| Access          | Read only   |         |   |
| Release version | 1.0   |         |   |
| Arguments       | Name Data type Values   |         |   |
|                 | LED capabilities  | Integer | green_blink amber_blink / red_blink green amber/red; none |
| Example         | Get status led capabilities: cat \$bsp_path/led/led_status_capability |         |   |

#### 3.14.13 **Set Status Green/[Amber/Red]**

| Node name       | \$bsp_path/led/led_status_ <color></color>                        |           |        |
|-----------------|---|-----------|--------|
| Description     | Set status LED active   |           |        |
| Access          | Read/Write  |           |        |
| Release version | 1.0   |           |        |
| Arguments       | Name  | Data type | Values |
|                 | LED capabilities  | Integer   |        |
| Example         | Set status led active: echo 255 > \$bsp_path/led/led_status_green |           |        |

#### 3.14.14 Set Status LED Green/[Amber/Red] Delay Off

|--|--|

| Description     | Set status LED blinking off frequency  |  |  |  |  |
|-----------------|--|--|--|--|--|
| Access          | Read/Write   |  |  |  |  |
| Release version | 1.0  |  |  |  |  |
| Arguments       | Name Data type Values  |  |  |  |  |
|                 | LED capabilities Integer   |  |  |  |  |
| Example         | Set status led module 1green delay off:<br>echo 10 > \$bsp_path/led/led_status_green_delay_off |  |  |  |  |

## 3.14.15 Set Status LED Green/[Amber/Red] Delay On

| Node name       | \$bsp_path/led/led_status_ <color>_delay_on</color>                             |           |        |  |
|-----------------|---|-----------|--------|--|
| Description     | Set status LED blinking on frequency  |           |        |  |
| Access          | Read/Write  |           |        |  |
| Release version | 1.0   |           |        |  |
| Arguments       | Name  | Data type | Values |  |
|                 | LED capabilities Integer  |           |        |  |
| Example         | Set status module 1 active: echo 255 > \$bsp_path/led/led_status_green_delay_on |           |        |  |

#### 3.14.16 **Get Fan LED Capabilities**

| Node name       | \$bsp_path/led/led_system_capability   |         |   |
|-----------------|--|---------|---|
| Description     | Set/get system status LED  |         |   |
| Access          | Read only  |         |   |
| Release version | 1.0  |         |   |
| Arguments       | Name Data type Values  |         |   |
|                 | LED capabilities   | Integer | green_blink green_blink amber_blink / red_blink green amber/red; none |
| Example         | Get system status LED capabilities: cat \$bsp_path/led/led_system_capability |         |   |

#### **3.15 Power Control**

#### 3.15.1 **Get PSU sensor Current + thresholds**

| Node name       | \$bsp_path/power/psu <i< th=""><th>ndex&gt;_curr<sensor_n< th=""><th>ame&gt;<treshold></treshold></th></sensor_n<></th></i<> | ndex>_curr <sensor_n< th=""><th>ame&gt;<treshold></treshold></th></sensor_n<> | ame> <treshold></treshold> |  |
|-----------------|--|---|----------------------------|--|
| Description     | Get raw current value fr   | Get raw current value from psu sensor.  |                            |  |
|                 |  |   |                            |  |

| Example         | Get psu input current :  |   |                            |  |
|                 | cat \$bsp_path/power/psu <index>_curr_in</index>   |   |                            |  |
|                 | Get psu output current   | :   |                            |  |
|                 | cat \$bsp_path/power/psu <index>_curr</index>  |   |                            |  |

## 3.15.2 **Get PSU sensor Voltage + thresholds**

| Node name | \$bsp_path/power/psu <index>_volt<sensor_name><treshold></treshold></sensor_name></index> |
|-----------|---|
|           |   |

| Description     | Get raw volt value from  | Get raw volt value from psu sensor. |                     |  |
|-----------------|--|-------------------------------------|---------------------|--|
|                 | Index:   |                                     |                     |  |
|                 | PSU index (1,2 etc.)   |                                     |                     |  |
|                 | sensor_name:   |                                     |                     |  |
|                 | "_in" – input volt sensor  |                                     |                     |  |
|                 | "_out2" – output volt sei  | nsor                                |                     |  |
|                 |  |                                     |                     |  |
|                 | treshold (if exists):  |                                     |                     |  |
|                 | "_lcrit" – critical minimu   | m                                   |                     |  |
|                 | "_min" –minimum  |                                     |                     |  |
|                 | "_max" - maximum   | "_max" - maximum                    |                     |  |
|                 |  |                                     |                     |  |
|                 | Note: available threshold types and their values depends on PSU ty   |                                     | depends on PSU type |  |
| Access          | Read only  |                                     |                     |  |
| Release version | 1.0  |                                     |                     |  |
| Arguments       | Name   | Data type                           | Values              |  |
|                 | Voltage  | Integer                             | Х                   |  |
| Example         | Get psu input volt: cat \$bsp_path/power/psu <index>_volt_in</index> |                                     |                     |  |
|                 | Get psu output volt:   | Get psu output volt:                |                     |  |
|                 | cat \$bsp_path/power/psu <index>_volt_out2</index>                   |                                     |                     |  |

#### 3.15.3 **Get PSU sensor Power + thresholds**

| Node name   | \$bsp_path/power/psu <index>_power<sensor_name><treshold></treshold></sensor_name></index> |
|-------------|--|
| Description | Get raw power value from psu sensor.   |
|             |  |
|             | Index:   |
|             | PSU index (1,2 etc.)   |
|             |  |
|             | sensor_name:   |
|             | "_in" – input power sensor   |
|             | "" – output power sensor   |
|             |  |
|             | treshold (if exists):  |
|             | "_max" - maximum   |
|             | "_crit" – critical maximum   |
|             | Note: available threshold types and their values depends on PSU type                       |
| Access      | Read only  |

| Release version | 1.0  |           |        |
|-----------------|--|-----------|--------|
| Arguments       | Name   | Data type | Values |
|                 | Power  | Integer   | Х      |
| Example         | Get psu input power: cat \$bsp_path/power/psu <index>_power_in</index> |           |        |
|                 | Get psu output power: cat \$bsp_path/power/psu <index>_power</index>   |           |        |

## 3.15.4 **Get PSU sensor capability**

| Node name       | \$bsp_path/power/psu <ir< th=""><th>ndex&gt;_<sensor_type>_cap</sensor_type></th><th>pability</th></ir<>         | ndex>_ <sensor_type>_cap</sensor_type> | pability |
|-----------------|--|--|----------|
| Description     | Get available thresholds capability list for psu sensor.   |  |          |
|                 | Show available sensor thresholds separated by space.   |  |          |
|                 |  |  |          |
|                 | Index:   |  |          |
|                 | PSU index (1,2 etc.)   |  |          |
|                 |  |  |          |
|                 | sensor_type:   |  |          |
|                 | any available psu sensor.  |  |          |
|                 | Example:   |  |          |
|                 | "volt_in" – input volt sensor  |  |          |
|                 | "curr" – output current s  |  |          |
|                 | "power_in" – input powe  | er sensor                              |          |
| Access          | Read only  |  |          |
| Release version | 1.0  | <u>-</u>                               |          |
| Arguments       | Name   | Data type                              | Values   |
|                 | capability   | String                                 | X        |
| Example         | Get psu input voltage capability: cat \$bsp_path/power/psu <index>_volt_in_capability min max crit lcrit</index> |  |          |
|                 | Get psu output power capability: cat \$bsp_path/power/psu <index> power_capability max crit</index>              |  | ty       |

# 3.16 System / Power Control

#### 3.16.1 **Get ASIC Health**

| Node name       | \$bsp_path/system/as                               | \$bsp_path/system/asic_health |               |  |
|-----------------|--|-------------------------------|---------------|--|
| Description     | Read ASIC health indi                              | Read ASIC health indicator    |               |  |
| Access          | Read only  | Read only                     |               |  |
| Release version | 1.0  | 1.0                           |               |  |
| Arguments       | Name   | Name Data type Values         |               |  |
|                 | System attribute                                   | Integer                       | 2 - Good      |  |
|                 |  |                               | Other – error |  |
| Example         | Get ASIC health: cat \$bsp_path/system/asic_health |                               |               |  |

## 3.16.2 **Get CPLD Major Version**

| Node name       | \$bsp_path/system/cpld <index>_version</index>         |           |        |  |
|-----------------|--|-----------|--------|--|
| Description     | Get CPLD major version of each CPLD index              |           |        |  |
| Access          | Read only  | Read only |        |  |
| Release version | 1.0  |           |        |  |
| Arguments       | Name Data type Values                                  |           | Values |  |
|                 | System attribute                                       | Integer   |        |  |
| Example         | Get CPLD1 version: cat \$bsp_path/system/cpld1_version |           |        |  |

#### 3.16.3 **Get CPLD Part Number**

| Node name       | \$bsp_path/system/cpld <index>_pn</index>             |           |        |
|-----------------|---|-----------|--------|
| Description     | Get CPLD part number of each CPLD index               |           |        |
| Access          | Read only   |           |        |
| Release version | 1.0   |           |        |
| Arguments       | Name  | Data type | Values |
|                 | System attribute                                      | Integer   |        |
| Example         | Get CPLD1 part number: cat \$bsp_path/system/cpld1_pn |           |        |

#### 3.16.4 **Get CPLD Minor Version**

| Node name   | \$bsp_path/system/cpld <index>_version_min</index> |
|-------------|--|
| Description | Get CPLD minor version of each CPLD index          |
| Access      | Read only  |

| Release version | 1.0  |           |        |
|-----------------|--|-----------|--------|
| Arguments       | Name   | Data type | Values |
|                 | System attribute   | Integer   |        |
| Example         | Get CPLD1 minor version: cat \$bsp_path/system/cpld1_version_min |           |        |

#### 3.16.5 **Get CPLD Full Version**

| Node<br>name       | \$bsp_path/system/cpld   |                          |                                |
|--------------------|--|--------------------------|--------------------------------|
| Descriptio<br>n    | Get CPLD full version  Note: for systems equipped wi port CPLD)                      | th Spectrum1 only CPLD m | najor version is available for |
| Access             | Read only  |                          |                                |
| Release<br>version | 1.0  |                          |                                |
| Argument           | Name   | Data type                | Values                         |
| S                  | System attribute   | string                   |                                |
| Example            | Get CPLD full version: cat \$bsp_path/system/cpld CPLD000120_REV0601_CPLD00 _REV0100 | 00165_REV0303_CPLD000:   | 166_REV0300_CPLD000167         |

## 3.16.6 Fan Direction

| Node name       | \$bsp_path/system/fan_dir   |                            |           |
|-----------------|---|----------------------------|-----------|
| Description     | Get FAN direction (forward or reverse)  |                            |           |
|                 | Bitwise attribute which in  | ndicates each fan directio | n:        |
|                 | 0 - reversed.   |                            |           |
|                 | 1 - forward.  |                            |           |
|                 | For example, value 15 in  | dicate system with 4 forw  | ard fans. |
|                 | Fan direction in case of fan absence return zero value, therefore it is recommended to check fan presence before reading fan direction.     |                            |           |
|                 | Note: This attribute supported from SPC2 forward. SPC1 systems require fan eeprom read. Model name contain 'F'/'R' character for direction. |                            |           |
| Access          | Read  |                            |           |
| Release version | 1.0   |                            |           |
| Arguments       | Name  | Data type                  | Values    |
|                 | System attribute  | Integer                    | 0-255     |

| Example | Read fan direction.             |
|---------|---------------------------------|
|         | cat > \$bsp_path/system/fan_dir |

#### 3.16.7 **Set JTAG Mode**

| Node name       | \$bsp_path/system/jta | \$bsp_path/system/jtag_enable                                 |  |  |
|-----------------|-----------------------|---|--|--|
| Description     | Set JTAG mode enabl   | Set JTAG mode enable/disable                                  |  |  |
| Access          | Write / Read          | Write / Read  |  |  |
| Release version | 1.0                   | 1.0   |  |  |
| Arguments       | Name                  | Name Data type Values   |  |  |
|                 | System attribute      | System attribute Integer 0/1                                  |  |  |
| Example         | , ,                   | Enable jtag interface: echo 1 > \$bsp_path/system/jtag_enable |  |  |

## 3.16.8 **Set PSU On/Off**

| Node name       | \$bsp_path/system/psu <index>_on</index>          |  |  |
|-----------------|---|--|--|
| Description     | Set system PSU to be ON/OFF                       |  |  |
| Access          | Write / Read                                      |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values                             |  |  |
|                 | System attribute Integer                          |  |  |
| Example         | Turn PSU1 off: echo 0 > \$bsp_path/system/psu1_on |  |  |

## 3.16.9 **Set System Power Cycle**

| Node name       | \$bsp_path/system/pw   | \$bsp_path/system/pwr_cycle |        |  |
|-----------------|--|-----------------------------|--------|--|
| Description     | Set system power cycl  | Set system power cycle      |        |  |
| Access          | Write / Read   | Write / Read                |        |  |
| Release version | 1.0  | 1.0                         |        |  |
| Arguments       | Name   | Data type                   | Values |  |
|                 | System attribute   | Integer                     |        |  |
| Example         | Power cycle the system: echo 1 > \$bsp_path/system/pwr_cycle |                             |        |  |

#### 3.16.10 **Set System Power Down**

| Node name       | \$bsp_path/system/pv                      | \$bsp_path/system/pwr_down                              |  |  |
|-----------------|---|---|--|--|
| Description     | Set system power do                       | Set system power down                                   |  |  |
| Access          | Write / Read                              | Write / Read  |  |  |
| Release version | 1.0                                       | 1.0   |  |  |
| Arguments       | Name                                      | Name Data type Values                                   |  |  |
|                 | System attribute                          | System attribute Integer                                |  |  |
| Example         | Turn system off:<br>echo 1 > \$bsp_path/s | Turn system off:<br>echo 1 > \$bsp_path/system/pwr_down |  |  |

#### 3.16.11 **Set Line Card Power**

| Node name       | \$bsp_path/system/lc{n}_pwr  |         |  |
|-----------------|--|---------|--|
| Description     | switching line cards power on and off. 1 - related line card is powered on, 0 - powered off. |         |  |
| Access          | Write / Read   |         |  |
| Release version | 1.0  |         |  |
| Arguments       | Name Data type Values  |         |  |
|                 | System attribute   | Integer |  |
| Example         | Turn power off echo 0> \$bsp_path/system/lc1_pwr   |         |  |

#### 3.16.12 **Set Line Card Enable**

| Node name   | \$bsp_path/system/lc{n}_enable   |
|-------------|--|
| Description | line cards enable state control. 1 - related line card is in enable state, 0 — card in disabled state. |
| Access      | Write / Read   |

| Release version | 1.0   |           |        |
|-----------------|---|-----------|--------|
| Arguments       | Name  | Data type | Values |
|                 | System attribute  | Integer   |        |
| Example         | Turn lc enabled:<br>echo 1 > \$bsp_path/system/lc1_enable |           |        |

#### 3.16.13 Read Line Card Active

| Node name       | \$bsp_path/system/lc{n}_active                             |      |  |  |
|-----------------|--|------|--|--|
| Description     | Read Ic <index> active status</index>                      |      |  |  |
| Access          | Read   | Read |  |  |
| Release version | 1.0  |      |  |  |
| Arguments       | Name Name Name   |      |  |  |
|                 | System attribute System attribute System attribute         |      |  |  |
| Example         | read lc1 activity status: cat \$bsp_path/system/lc1_active |      |  |  |

#### 3.16.14 Read Line Card Powered

| Node name       | \$bsp_path/system/lc{n}_powered                            |  |  |  |
|-----------------|--|--|--|--|
| Description     | Read lc <index> powere</index>                             | Read Ic <index> powered status</index> |  |  |
| Access          | Read   | Read                                   |  |  |
| Release version | 1.0  | 1.0                                    |  |  |
| Arguments       | Name   | Name Name Name                         |  |  |
|                 | System attribute System attribute System attribute         |  |  |  |
| Example         | read lc1 powered status: cat \$bsp_path/system/lc1_powered |  |  |  |

#### 3.16.15 **Read Line Card Present**

| Node name       | \$bsp_path/system/lc{n}_present                            |  |  |  |
|-----------------|--|--|--|--|
| Description     | Read Ic <index> present</index>                            | Read Ic <index> present status</index> |  |  |
| Access          | Read   | Read                                   |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name   | Name Name Name                         |  |  |
|                 | System attribute System attribute System attribute         |  |  |  |
| Example         | read lc1 present status: cat \$bsp_path/system/lc1_present |  |  |  |

## 3.16.16 **Read Line Card Ready**

| Node name       | \$bsp_path/system/lc          | \$bsp_path/system/lc{n}_ready                          |  |  |
|-----------------|-------------------------------|--|--|--|
| Description     | Read Ic <index> ready</index> | Read Ic <index> ready status</index>                   |  |  |
| Access          | Read                          | Read   |  |  |
| Release version | 1.0                           | 1.0  |  |  |
| Arguments       | Name                          | Name Name Name   |  |  |
|                 | System attribute              | System attribute System attribute System attribute     |  |  |
| Example         | •                             | read lc1 ready status: cat \$bsp_path/system/lc1_ready |  |  |

## 3.16.17 Read Line Card Synced

| Node name       | \$bsp_path/system/lc{n}_synced                           |                                       |  |  |
|-----------------|--|---------------------------------------|--|--|
| Description     | Read Ic <index> synced st</index>                        | Read Ic <index> synced status</index> |  |  |
| Access          | Read   | Read                                  |  |  |
| Release version | 1.0  | 1.0                                   |  |  |
| Arguments       | Name Name Name   |                                       |  |  |
|                 | System attribute System attribute System attribute       |                                       |  |  |
| Example         | read lc1 synced status: cat \$bsp_path/system/lc1_synced |                                       |  |  |

#### 3.16.18 Read Line Card Verified

| Node name       | \$bsp_path/system/lc{r                                       | \$bsp_path/system/lc{n}_verified        |                  |  |
|-----------------|--|---|------------------|--|
| Description     | Read Ic <index> verified</index>                             | Read lc <index> verified status</index> |                  |  |
| Access          | Read   | Read                                    |                  |  |
| Release version | 1.0  | 1.0                                     |                  |  |
| Arguments       | Name   | Name Name Name                          |                  |  |
|                 | System attribute   | System attribute                        | System attribute |  |
| Example         | read lc1 verified status: cat \$bsp_path/system/lc1_verified |   |                  |  |

#### 3.16.19 Read Line Card Reset Mask

| Node name       | \$bsp_path/system/lc{n}_rst_mask   |
|-----------------|------------------------------------|
| Description     | Read Ic <index> reset mask</index> |
| Access          | Read                               |
| Release version | 1.0                                |

| Arguments | Name  | Name             | Name             |
|-----------|---|------------------|------------------|
|           | System attribute  | System attribute | System attribute |
| Example   | read lc1 reset mask: cat \$bsp_path/system/lc1_rst_mask |                  |                  |

#### 3.16.20 **Set Line Card Shutdown**

| Node name       | \$bsp_path/system/lc{n}                                      | \$bsp_path/system/lc{n}_shutdown |        |  |
|-----------------|--|----------------------------------|--------|--|
| Description     | Set lc <index> shutdown</index>                              | Set lc <index> shutdown</index>  |        |  |
| Access          | Write  | Write                            |        |  |
| Release version | 1.0  | 1.0                              |        |  |
| Arguments       | Name   | Data type                        | Values |  |
|                 | System attribute   | Integer                          |        |  |
| Example         | Set lc1 shutdown:<br>echo 1 > \$bsp_path/system/lc1_shutdown |                                  |        |  |

#### 3.16.21 **Set VPD Write Protect**

| Node name       | \$bsp_path/system/vpd_wp  |              |  |  |
|-----------------|---|--------------|--|--|
| Description     | allow to overwrite system VPD. 1 - write protection is disabled, when 0 - enabled. By default write is protected. |              |  |  |
| Access          | Write / Read  | Write / Read |  |  |
| Release version | 1.0   |              |  |  |
| Arguments       | Name Data type Values   |              |  |  |
|                 | System attribute Integer  |              |  |  |
| Example         | Turn write protect off: echo 1 > \$bsp_path/system/vpd_wp   |              |  |  |

## 3.16.22 **Set ASIC Up during PCIe root complex reset**

| Node name       | \$bsp_path/system/pcie_asic_reset_dis  |           |        |
|-----------------|--|-----------|--------|
| Description     | allows to retain ASIC up during PCIe root complex reset, when attribute is set 1 |           |        |
| Access          | Write / Read   |           |        |
| Release version | 1.0  |           |        |
| Arguments       | Name   | Data type | Values |

|         | System attribute                             | Integer                |  |
|---------|--|------------------------|--|
| Example | Retain ASIC up:<br>echo 1 > \$bsp_path/syste | em/pcie_asic_reset_dis |  |

## 3.16.23 **Get Voltreg Update status**

| Node name       | \$bsp_path/system/voltreg_update_status  |           |        |
|-----------------|--|-----------|--------|
| Description     | exposes the configuration update status of burnable voltage regulator devices. The status values are as following:  0 - OK; 1 - CRC failure; 2 = I2C failure; 3 - in progress. |           |        |
| Access          | Read   |           |        |
| Release version | 1.0  |           |        |
| Arguments       | Name   | Data type | Values |
|                 | System attribute   | Integer   |        |
| Example         | Get voltreg update status: cat \$bsp_path/system/voltreg_update_status   |           |        |

## 3.16.24 **Get Config1, Config2**

| Node name       | \$bsp_path/system/config1   \$bsp_path/system/config2  |         |        |
|-----------------|--|---------|--------|
| Description     | show system static topology identification like system's static I2C topology, number and type of FPGA devices within the system and so on. |         |        |
| Access          | Read   |         |        |
| Release version | 1.0  |         |        |
| Arguments       | Name Data type Values  |         | Values |
|                 | System attribute   | Integer |        |
| Example         | Get config1 status: cat \$bsp_path/system/config1  |         |        |

#### 3.16.25 **Get Ufm Version**

| Node name | \$bsp_path/system/ufm_version |
|-----------|-------------------------------|
|-----------|-------------------------------|

| Description     | exposes the firmware version of burnable voltage regulator devices. |         |  |
|-----------------|---|---------|--|
| Access          | Read  |         |  |
| Release version | 1.0   |         |  |
| Arguments       | Name Data type Values   |         |  |
|                 | System attribute  | Integer |  |
| Example         | Get ufm version: cat \$bsp_path/system/ufm_version                  |         |  |

#### 3.16.26 **Get Reset Cause**

| Node name   | \$bsp_path/system/reset_ <cause></cause>   |
|-------------|--|
| Description | Reset cause vary between SPC and SPC2.   |
|             | Get last reset cause – <cause>:</cause>  |
|             | Spectrum:  |
|             | <ul> <li>long_pb – Reset button was pushed for more than 15 seconds.</li> </ul>  |
|             | <ul> <li>short_pb – Reset button was pushed for less than 15 seconds.</li> </ul>   |
|             | <ul> <li>aux_pwr_or_ref – Main 12V DC drop due to power failure or<br/>AC removal in both PS units -or- CPLD code refresh by the<br/>CPLD field upgrade tool.</li> </ul> |
|             | <ul> <li>main_pwr_fail - CPU power failure.</li> </ul>   |
|             | <ul> <li>sw_reset - Reset or power off initiated by the OS.</li> </ul>   |
|             | <ul> <li>fw_reset - Reset or power off initiated by the Switch ASIC FW.</li> </ul>   |
|             | <ul> <li>hotswap_or_wd - Reset or power off initiated by the watch<br/>dog mechanism.</li> </ul>   |
|             | <ul> <li>asic thermal – Switch ASIC power drop due to failure or due to<br/>thermal shutdown activation.</li> </ul>  |
|             | <b>Note</b> : MSN2010, MSN2100 and MSN2740 systems supports two additional causes:   |
|             | <ul> <li>hotswap_or_halt - Reset or power off intitaed by PSU swap.</li> </ul>   |
|             | <ul> <li>sff_wd - Reset or power off initiated by CPU watch dog<br/>mechanism.</li> </ul>  |
|             | Note: MSN2210 supports additional causes:  |
|             | <ul><li>reset_system</li></ul>   |
|             | <ul><li>reset_sw_pwr_off</li></ul>   |
|             | <ul><li>reset_cpu_pwr_fail</li></ul>   |
|             | <ul> <li>reset reload bios</li> </ul>  |

reset\_ac\_pwr\_fail

#### Spectrum-2/3:

- long\_pb Reset button was pushed for more than 15 seconds.
- short pb Reset button was pushed for less than 15 seconds.
- aux\_pwr\_or\_ref Main 12V DC drop due to power failure or AC removal in both PS units -or- CPLD code refresh by the CPLD field upgrade tool.
- from\_comex Reset or power off initiated by the OS.
- from\_asic Reset or power off initiated by the Switch ASIC FW.
- swb\_wd reset or power off initiated by swb watchdog.
- asic thermal ASIC power drop due to failure or due to thermal shutdown activation
- comex pwr fail power failure to comex.
- voltmon\_upgrade\_fail Reset due to voltage monitor upgrade failure.
- system system initiate reset
- comex\_thermal Comex power drop due to thermal shutdown activation.
- reload\_bios Reset caused by BIOS reload.

sw\_pwr\_off - reset triggered by power off initiated by software through CPLD

Note: For must causes only one attribute is on, except Comex wd and Comex power fail causes which are set in addition to reset\_from\_comex.

#### For MSN4800

#### From management board

- reset\_long\_pb Reset push button was pressed for more than 15 seconds (Button)
- reset\_short\_pb Reset push button was pressed for less than 15 seconds (Button)
- reset\_aux\_pwr\_or\_fu Reset was asserted due to CPLD power down or CPLD code refresh (CPLD)
- reset\_mgmt\_dc\_dc\_pwr\_fail Failure one of management board DC2DC voltage regulator 5 Volt rail (Power issue)
- reset\_sys\_comex\_bios Reset, or power cycle was requested by SW or BIOS reload (SW)

| Г               | 1  |  |   |                     |

## 3.17 Thermal

## 3.17.1 **Read Switch ASIC Temperature**

| Node name   | \$bsp_path/thermal/asic                      |
|-------------|--|
| Description | Read value of switch module ASIC temperature |

| Access          | Read only   |           |                            |
|-----------------|---|-----------|----------------------------|
| Release version | 1.0   |           |                            |
| Arguments       | Name  | Data type | Values                     |
|                 | Thermal   | Integer   | Degrees in mili<br>Celsius |
| Example         | Get switch module ASIC temperature: cat \$bsp_path/thermal/asic |           |                            |

### 3.17.2 **Read Switch ASIC Temperature Normal**

| Node name       | \$bsp_path/therm | \$bsp_path/thermal/asic_temp_norm  |  |  |  |
|-----------------|------------------|--|--|--|--|
| Description     | Read value of sw | Read value of switch module ASIC temperature Normal                              |  |  |  |
| Access          | Read only        | Read only  |  |  |  |
| Release version | 1.0              | 1.0  |  |  |  |
| Arguments       | Name             | Name Data type Values  |  |  |  |
|                 | Thermal          | Thermal Integer Degrees in mili Celsius  |  |  |  |
| Example         |                  | Get switch module ASIC temperature normal: cat \$bsp_path/thermal/asic_temp_norm |  |  |  |

#### 3.17.3 **Read Switch ASIC Temperature Critical**

| Node name       | \$bsp_path/thermal/asic_temp_crit  |           |  |  |
|-----------------|--|-----------|--|--|
| Description     | Read value of switch module ASIC temperature critical                              |           |  |  |
| Access          | Read only  | Read only |  |  |
| Release version | 1.0  |           |  |  |
| Arguments       | Name Data type Values  |           |  |  |
|                 | Thermal Integer Degrees in mili Celsius  |           |  |  |
| Example         | Get switch module ASIC temperature critical: cat \$bsp_path/thermal/asic_temp_crit |           |  |  |

#### 3.17.4 Read Switch ASIC Temperature Emergency

| Node name   | \$bsp_path/thermal/asic_temp_emergency                 |  |
|-------------|--|--|
| Description | Read value of switch module ASIC temperature emergency |  |
| Access      | Read only  |  |

| Release version | 1.0  |           |                            |
|-----------------|--|-----------|----------------------------|
| Arguments       | Name   | Data type | Values                     |
|                 | Thermal  | Integer   | Degrees in mili<br>Celsius |
| Example         | Get switch module ASIC temperature emergency: cat \$bsp_path/thermal/asic_temp_emergency |           |                            |

### 3.17.5 **Read Switch ASIC Temperature Trip Critical**

| Node name       | \$bsp_path/therm | \$bsp_path/thermal/asic_temp_trip_crit   |  |  |  |
|-----------------|------------------|--|--|--|--|
| Description     | Read value of sw | Read value of switch module ASIC temperature trip critical                                   |  |  |  |
| Access          | Read only        | Read only  |  |  |  |
| Release version | 1.0              | 1.0  |  |  |  |
| Arguments       | Name             | Name Data type Values  |  |  |  |
|                 | Thermal          | Thermal Integer Degrees in mili Celsius  |  |  |  |
| Example         |                  | Get switch module ASIC temperature trip critical: cat \$bsp_path/thermal/asic_temp_trip_crit |  |  |  |

### 3.17.6 Read Switch Comex Temperature

| Node name       | \$bsp_path/thermal/comex_amb            |                       |  |  |
|-----------------|---|-----------------------|--|--|
| Description     | Read value of Comex ambient temperature |                       |  |  |
|                 | Note: supported by com                  | ex based systems only |  |  |
| Access          | Read only                               |                       |  |  |
| Release version | 1.0                                     |                       |  |  |
| Arguments       | Name                                    | Name Data type Values |  |  |
|                 | Thermal Integer Degrees in mili         |                       |  |  |
|                 | Celsius                                 |                       |  |  |
| Example         | Get comex ambient temperature.          |                       |  |  |
|                 | cat \$bsp_path/thermal/                 | comex_amb             |  |  |

### 3.17.7 **Read Cooling State**

| Node name       | \$bsp_path/thermal/cooling_cur_state |  |
|-----------------|--------------------------------------|--|
| Description     | Set PWM steps                        |  |
| Access          | Write/Read                           |  |
| Release version | 1.0                                  |  |

| Arguments | Name  | Data type | Values |
|-----------|---|-----------|--------|
|           | Thermal   | Integer   |        |
| Example   | Set PWM state: cat \$bsp_path/thermal/cooling_cur_state |           |        |

### 3.17.8 **Read CPU Core Temperature**

| Node name       | \$bsp_path/thermal/  | \$bsp_path/thermal/cpu_core <index></index>        |  |  |
|-----------------|--|--|--|--|
| Description     | Get CPU core tempe   | Get CPU core temperature (in millidegrees Celsius) |  |  |
| Access          | Read   | Read   |  |  |
| Release version | 1.0  | 1.0  |  |  |
| Arguments       | Name   | Name Data type Values                              |  |  |
|                 | Thermal  | Thermal Integer                                    |  |  |
| Example         | Get CPU core 2 temperature: cat \$bsp_path/thermal/cpu_core2 |  |  |  |

### 3.17.9 **CPU Core Critical Temperature**

| Node name       | \$bsp_path/thermal/  | \$bsp_path/thermal/cpu_core <index>_crit</index>                    |  |  |
|-----------------|--|---|--|--|
| Description     | Get CPU core maxim   | Get CPU core maximum junction temperature (in millidegrees Celsius) |  |  |
| Access          | Read   | Read  |  |  |
| Release version | 1.0  | 1.0   |  |  |
| Arguments       | Name   | Name Data type Values   |  |  |
|                 | Thermal Integer  |   |  |  |
| Example         | Get CPU core 2 temperature critical level: cat \$bsp_path/thermal/cpu_core2_crit |   |  |  |

### 3.17.10 **CPU Core Critical Temperature Alarm**

| Node name       | \$bsp_path/therm  | \$bsp_path/thermal/cpu_core <index>_crit_alarm</index>                  |  |  |  |
|-----------------|-------------------|---|--|--|--|
| Description     | When critical ten | When critical temperature reached, alarm set on (1, 0)                  |  |  |  |
| Access          | Read              | Read  |  |  |  |
| Release version | 1.0               | 1.0   |  |  |  |
| Arguments       | Name              | Name Data type Values   |  |  |  |
|                 | Thermal           | Thermal Integer 1,0   |  |  |  |
| Example         |                   | Get CPU core 2 temperature: cat \$bsp_path/thermal/cpu_core2_crit_alarm |  |  |  |

#### 3.17.11 **CPU Core Temperature Max**

| Node name       | \$bsp_path/thermal/cpu_core <index>_max</index>                  |   |  |  |
|-----------------|--|---|--|--|
| Description     | Get CPU core max temp  | Get CPU core max temperature that require cooling device full speed |  |  |
| Access          | Read   | Read  |  |  |
| Release version | 1.0  |   |  |  |
| Arguments       | Name Data type Values  |   |  |  |
|                 | Thermal Integer  |   |  |  |
| Example         | Get CPU core 2 temperature: cat \$bsp_path/thermal/cpu_core2_max |   |  |  |

#### 3.17.12 **Read CPU Pack Temperature**

| Node name       | \$bsp_path/thermal/cpu_pack                               |                          |  |  |
|-----------------|---|--------------------------|--|--|
| Description     | Get CPU core tempera                                      | Get CPU core temperature |  |  |
| Access          | Read  | Read                     |  |  |
| Release version | 1.0   | 1.0                      |  |  |
| Arguments       | Name  | Name Data type Values    |  |  |
|                 | Thermal Integer   |                          |  |  |
| Example         | Get CPU pack temperature: cat \$bsp_path/thermal/cpu_pack |                          |  |  |

### 3.17.13 **CPU Pack Critical Temperature**

| Node name       | \$bsp_path/thermal/cpu_pack_crit                                    |  |  |
|-----------------|---|--|--|
| Description     | Get CPU pack maximum junction temperature (in millidegrees Celsius) |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | Thermal Integer   |  |  |
| Example         | Get CPU pack: cat \$bsp_path/thermal/cpu_core2_crit                 |  |  |

### 3.17.14 **CPU Pack Critical Temperature Alarm**

| Node name       | \$bsp_path/thermal/cpu_pack_crit                                |
|-----------------|---|
| Description     | When CPU pack critical temperature reached, alarm set on (1, 0) |
| Access          | Read  |
| Release version | 1.0   |

| Arguments | Name                                      | Data type          | Values |
|-----------|---|--------------------|--------|
|           | Thermal                                   | Integer            | 1,0    |
| Example   | Get CPU pack:<br>cat \$bsp_path/thermal/c | pu_pack_crit_alarm |        |

## 3.17.15 **CPU Pack Temperature Max**

| Node name       | \$bsp_path/therm                   | \$bsp_path/thermal/cpu_pack_max                                     |  |  |
|-----------------|------------------------------------|---|--|--|
| Description     | Get CPU pack ma                    | Get CPU pack max temperature that require cooling device full speed |  |  |
| Access          | Read                               | Read  |  |  |
| Release version | 1.0                                | 1.0   |  |  |
| Arguments       | Name                               | Name Data type Values   |  |  |
|                 | Thermal                            | Thermal Integer   |  |  |
| Example         | Get CPU pack:<br>cat \$bsp_path/th | Get CPU pack: cat \$bsp_path/thermal/cpu_pack_max                   |  |  |

### 3.17.16 Read Fan Max Speed

| Node name       | \$bsp_path/therm  | \$bsp_path/thermal/fan <index>_max</index>             |  |  |
|-----------------|-------------------|--|--|--|
| Description     | Get fan max speed | Get fan max speed                                      |  |  |
| Access          | Read              | Read   |  |  |
| Release version | 1.0               | 1.0  |  |  |
| Arguments       | Name              | Name Data type Values                                  |  |  |
|                 | Thermal           | Thermal Integer  |  |  |
| Example         | -                 | Get fan4 max speed:<br>cat \$bsp_path/thermal/fan4_max |  |  |

# 3.17.17 Read Fan Min Speed

| Node name       | \$bsp_path/therm  | \$bsp_path/thermal/fan <index>_min</index>             |        |  |
|-----------------|-------------------|--|--------|--|
| Description     | Get fan min speed | Get fan min speed                                      |        |  |
| Access          | Read              | Read   |        |  |
| Release version | 1.0               | 1.0  |        |  |
| Arguments       | Name              | Data type  | Values |  |
|                 | Thermal           | Integer  |        |  |
| Example         | •                 | Get fan4 min speed:<br>cat \$bsp_path/thermal/fan4_min |        |  |

#### 3.17.18 Read Fan Direction

| Node name       | \$bsp_path/therm  | \$bsp_path/thermal/fan <index>_dir</index>          |                             |  |
|-----------------|-------------------|---|-----------------------------|--|
| Description     | Get fan Direction | Get fan Direction                                   |                             |  |
| Access          | Read              |   |                             |  |
| Release version | 7.0010.2100       | 7.0010.2100   |                             |  |
| Arguments       | Name              | Data type   | Values                      |  |
|                 | Thermal           | Integer   | 0,1<br>(0=intake,1=exhaust) |  |
| Example         | Get fan4 directio | Get fan4 direction: cat \$bsp_path/thermal/fan4_dir |                             |  |

#### 3.17.19 Read Fan Status

| Node name       | \$bsp_path/therma                                   | \$bsp_path/thermal/fan <index>_status</index> |  |  |
|-----------------|---|---|--|--|
| Description     | Get fan status                                      | Get fan status                                |  |  |
| Access          | Read  | Read  |  |  |
| Release version | 1.0   | 1.0   |  |  |
| Arguments       | Name  | Name Data type Values                         |  |  |
|                 | Thermal   | Thermal Integer                               |  |  |
| Example         | Get fan4 status: cat \$bsp_path/thermal/fan4_status |   |  |  |

#### 3.17.20 Read Fan Fault

| Node name       | \$bsp_path/therma                                 | \$bsp_path/thermal/fan <index>_fault</index> |  |  |
|-----------------|---|--|--|--|
| Description     | Is fan in fault state                             | Is fan in fault state (0-OK, 1-FAULT)        |  |  |
| Access          | Read  | Read   |  |  |
| Release version | 1.0   | 1.0  |  |  |
| Arguments       | Name  | Name Data type Values                        |  |  |
|                 | Thermal   | Thermal Integer 0,1                          |  |  |
| Example         | Get fan4 fault: cat \$bsp_path/thermal/fan4_fault |  |  |  |

#### 3.17.21 Read Port Ambient

| Node name       | \$bsp_path/therm | \$bsp_path/thermal/port_amb                                    |  |  |
|-----------------|------------------|--|--|--|
| Description     | Get ports ambien | Get ports ambient temperature                                  |  |  |
| Access          | Read             | Read   |  |  |
| Release version | 1.0              | 1.0  |  |  |
| Arguments       | Name             | Name Data type Values  |  |  |
|                 | Thermal          | Thermal Integer  |  |  |
| Example         | •                | Get ports ambient temperature: cat \$bsp_path/thermal/port_amb |  |  |

### 3.17.22 **Read PSU Temperature**

| Node name       | \$bsp_path/thermal/psu                                 | \$bsp_path/thermal/psu <index>_temp</index> |  |  |  |
|-----------------|--|---|--|--|--|
| Description     | Get power supply unit t                                | Get power supply unit temperature           |  |  |  |
| Access          | Read   | Read  |  |  |  |
| Release version | 1.0  | 1.0   |  |  |  |
| Arguments       | Name   | Name Data type Values                       |  |  |  |
|                 | Thermal  | Thermal Integer                             |  |  |  |
| Example         | Get PSU2 temperature: cat \$bsp_path/thermal/psu2_temp |   |  |  |  |

#### 3.17.23 Read PSU Alarm

| Node name       | \$bsp_path/therm                     | \$bsp_path/thermal/psu <index>_alarm</index>      |  |  |
|-----------------|--------------------------------------|---|--|--|
| Description     | Get power status                     | Get power status (0-OK, 1-FAULT)                  |  |  |
| Access          | Read                                 | Read  |  |  |
| Release version | 1.0                                  | 1.0   |  |  |
| Arguments       | Name                                 | Name Data type Values                             |  |  |
|                 | Thermal                              | Thermal Integer 0,1                               |  |  |
| Example         | Get PSU2 alarm:<br>cat \$bsp_path/th | Get PSU2 alarm: cat \$bsp_path/thermal/psu2_alarm |  |  |

#### 3.17.24 **Read PSU Max**

| Node name       | \$bsp_path/thermal/psu <index>_max</index> |
|-----------------|--|
| Description     | Get power supply max temperature           |
| Access          | Read                                       |
| Release version | 1.0  |

| Arguments | Name                                      | Data type | Values |
|-----------|---|-----------|--------|
|           | Thermal                                   | Integer   |        |
| Example   | Get PSU2 max:<br>cat \$bsp_path/thermal/p | su2_max   |        |

## 3.17.25 Read PSU Fan Speed

| Node name       | \$bsp_path/therm         | \$bsp_path/thermal/psu <index_a>_fan<index_b>_speed_get</index_b></index_a>  |  |  |
|-----------------|--------------------------|--|--|--|
| Description     | <index_a> Numb</index_a> | Get power supply fans speed. <index_a> Number power supplies plugged into the system. <index_b> Number of fans in power supply</index_b></index_a> |  |  |
| Access          | Read                     |  |  |  |
| Release version | 1.0                      | 1.0  |  |  |
| Arguments       | Name                     | Name Data type Values  |  |  |
|                 | Thermal                  | Thermal Integer  |  |  |
| Example         | •                        | Get PSU2 fan1 speed: cat \$bsp_path/thermal/psu2_fan1_speed_get  |  |  |

# 3.17.26 Read PSU min/max Fan Speed

| Node name       | psu <index>_fan_</index> | psu <index>_fan_min/psu<index>_fan_max</index></index>                                   |  |  |  |
|-----------------|--------------------------|--|--|--|--|
| Description     | Get the default m        | Get the default min/max values of PSU fans speed RPM                                     |  |  |  |
| Access          | Read                     | Read   |  |  |  |
| Release version | V.7.0010.3300            | V.7.0010.3300  |  |  |  |
| Arguments       | Name                     | Name Data type Values  |  |  |  |
|                 | Status                   | Status Integer X   |  |  |  |
| Example         |                          | Get PSU FAN min default speed in RPM: cat \$bsp_path/thermal/psu <index>_fan_min</index> |  |  |  |

#### 3.17.27 Read PSU Power Status

| Node name       | \$bsp_path/thermal/psu <index>_pwr_status</index>                    |  |  |
|-----------------|--|--|--|
| Description     | Get power supply power status (1-PWR_GOOD, 0-UNPLUGGED/UNFUNCTIONAL) |  |  |
| Access          | Read   |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | Thermal Integer 1,0  |  |  |
| Example         | Get PSU2 power status: cat \$bsp_path/thermal/psu2_pwr_status        |  |  |

#### 3.17.28 Read PSU Status

| Node name       | \$bsp_path/therm                      | \$bsp_path/thermal/psu <index>_status</index>       |  |  |
|-----------------|---------------------------------------|---|--|--|
| Description     | Get power supply                      | Get power supply status (1 – IN; 0 – OUT)           |  |  |
| Access          | Read                                  | Read  |  |  |
| Release version | 1.0                                   | 1.0   |  |  |
| Arguments       | Name                                  | Name Data type Values                               |  |  |
|                 | Thermal                               | Thermal Integer 1,0                                 |  |  |
| Example         | Get PSU2 status:<br>cat \$bsp_path/th | Get PSU2 status: cat \$bsp_path/thermal/psu2_status |  |  |

### 3.17.29 **Read System PWM1**

| Node name       | \$bsp_path/thermal/p                  | \$bsp_path/thermal/pwm1        |  |  |  |
|-----------------|---------------------------------------|--------------------------------|--|--|--|
| Description     | Get/Set system fans of                | Get/Set system fans duty cycle |  |  |  |
| Access          | Read/Write                            | Read/Write                     |  |  |  |
| Release version | 1.0                                   | 1.0                            |  |  |  |
| Arguments       | Name                                  | Name Data type Values          |  |  |  |
|                 | Thermal                               | Thermal Integer 0-255          |  |  |  |
|                 | 0-low;255-max                         |                                |  |  |  |
| Example         | Get PWM1: cat \$bsp_path/thermal/pwm1 |                                |  |  |  |

## 3.17.30 Read Temperature Critical Module

| Node name       | \$bsp_path/thermal/module <index>_temp_crit</index>                     |  |  |
|-----------------|---|--|--|
| Description     | Get port module critical temperature level                              |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | Thermal Integer   |  |  |
| Example         | Get temp critical module 18: cat \$bsp_path/thermal/module18_temp_crit_ |  |  |

#### 3.17.31 Read Temperature Emergency Module

| Node name   | \$bsp_path/thermal/module <index>_temp_emergency</index> |
|-------------|--|
| Description | Get port module emergency level                          |
| Access      | Read   |

| Release version | 1.0  |           |        |
|-----------------|--|-----------|--------|
| Arguments       | Name   | Data type | Values |
|                 | Thermal  | Integer   |        |
| Example         | Get temp emergency module 18: cat \$bsp_path/thermal/module18_temp_emergency |           |        |

### 3.17.32 **Read Temperature Trip Critical Module**

| Node name       | \$bsp_path/thermal/module <index> _temp_trip_crit</index>                        |  |  |
|-----------------|--|--|--|
| Description     | Get port module temperature trip critical level                                  |  |  |
| Access          | Read   |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | Thermal Integer  |  |  |
| Example         | Get temp trip critical module 18: cat \$bsp_path/thermal/module18_temp_trip_crit |  |  |

### 3.17.33 **Read Temperature Fault Module**

| Node name       | \$bsp_path/therm  | \$bsp_path/thermal/module <index>_temp_fault</index>                 |  |  |
|-----------------|-------------------|--|--|--|
| Description     | Get indication of | Get indication of port module is in fault state (1-FAULT, 0-VALID)   |  |  |
| Access          | Read              | Read   |  |  |
| Release version | 1.0               | 1.0  |  |  |
| Arguments       | Name              | Name Data type Values  |  |  |
|                 | Thermal           | Thermal Integer  |  |  |
| Example         |                   | Get temp fault module 18: cat \$bsp_path/thermal/module18_temp_fault |  |  |

### 3.17.34 Read Temperature Input Module

| Node name       | \$bsp_path/thermal/module <index>_temp_input</index>                 |      |  |  |
|-----------------|--|------|--|--|
| Description     | Get port module temperature  |      |  |  |
| Access          | Read   | Read |  |  |
| Release version | 1.0  |      |  |  |
| Arguments       | Name Data type Values  |      |  |  |
|                 | Thermal Integer  |      |  |  |
| Example         | Get temp input module 18: cat \$bsp_path/thermal/module18_temp_input |      |  |  |

## 3.17.35 **Read Temperature Critical Gearbox**

| Node name       | \$bsp_path/thermal/gearbox <index>_temp_crit</index>                        |  |  |  |
|-----------------|---|--|--|--|
| Description     | Get gearbox critical temp   | Get gearbox critical temperature level |  |  |
| Access          | Read  | Read                                   |  |  |
| Release version | 1.0   |  |  |  |
| Arguments       | Name Data type Values   |  |  |  |
|                 | Thermal Integer   |  |  |  |
| Example         | Get temp critical gearbox 18: cat \$bsp_path/thermal/ gearbox 18_temp_crit_ |  |  |  |

## 3.17.36 **Read Temperature Emergency Gearbox**

| Node name       | \$bsp_path/thermal/gearbox <index>_temp_emergency</index>                      |                             |  |  |
|-----------------|--|-----------------------------|--|--|
| Description     | Get gearbox emergency  | Get gearbox emergency level |  |  |
| Access          | Read   | Read                        |  |  |
| Release version | 1.0  | 1.0                         |  |  |
| Arguments       | Name   | Name Data type Values       |  |  |
|                 | Thermal Integer  |                             |  |  |
| Example         | Get temp emergency gearbox 18: cat \$bsp_path/thermal/gearbox18_temp_emergency |                             |  |  |

### 3.17.37 **Read Temperature Trip Critical Gearbox**

| Node name       | \$bsp_path/thermal/gearbox <index> _temp_trip_crit</index>                          |   |  |  |
|-----------------|---|---|--|--|
| Description     | Get gearbox temperatur  | Get gearbox temperature trip critical level |  |  |
| Access          | Read  | Read  |  |  |
| Release version | 1.0   |   |  |  |
| Arguments       | Name  | Name Data type Values                       |  |  |
|                 | Thermal Integer   |   |  |  |
| Example         | Get temp trip critical gearbox 18: cat \$bsp_path/thermal/gearbox 18_temp_trip_crit |   |  |  |

### 3.17.38 **Read Temperature Input Gearbox**

| Node name       | \$bsp_path/thermal/gearbox <index>_temp_input</index>                   |  |  |
|-----------------|---|--|--|
| Description     | Get gearbox temperature   |  |  |
| Access          | Read  |  |  |
| Release version | 1.0   |  |  |
| Arguments       | Name Data type Values   |  |  |
|                 | Thermal Integer   |  |  |
| Example         | Get temp input gearbox 18: cat \$bsp_path/thermal/gearbox 18_temp_input |  |  |

#### 3.17.39 **Read Switch CPU Temperature**

| Node name       | \$bsp_path/thermal/cpu_ <core0 core1="" pack=""  =""></core0> |                                      |  |  |
|-----------------|---|--------------------------------------|--|--|
| Description     | Read value of CPU modu  | Read value of CPU module temperature |  |  |
| Access          | Read only   |                                      |  |  |
| Release version | 1.0   |                                      |  |  |
| Arguments       | Name Data type Values   |                                      |  |  |
|                 | Thermal Integer Degrees in mili Celsius                       |                                      |  |  |
| Example         | Get CPU Core 0 temperature: cat \$bsp_path/thermal/cpu_core0  |                                      |  |  |

#### 3.17.40 Read Switch Fan Temperature

| Node name       | \$bsp_path/thermal/fan_amb   |  |  |  |  |
|-----------------|--|--|--|--|--|
| Description     | Read value of switch fan   | Read value of switch fan ambient temperature |  |  |  |
| Access          | Read only  |  |  |  |  |
| Release version | 1.0  |  |  |  |  |
| Arguments       | Name   | Name Data type Values                        |  |  |  |
|                 | Thermal Integer Degrees in mili Celsius                                  |  |  |  |  |
| Example         | Get switch board ambient fan temperature: cat \$bsp_path/thermal/fan_amb |  |  |  |  |

# 3.17.41 Read Switch Port Temperature

| Node name       | \$bsp_path/therm  | \$bsp_path/thermal/port_amb   |  |  |  |
|-----------------|-------------------|---|--|--|--|
| Description     | Read value of swi | Read value of switch port ambient temperature                         |  |  |  |
| Access          | Read only         | Read only   |  |  |  |
| Release version | 1.0               | 1.0   |  |  |  |
| Arguments       | Name              | Name Data type Values   |  |  |  |
|                 | Thermal           | Thermal Integer Degrees in mili Celsius                               |  |  |  |
| Example         |                   | Get switch board ambient temperature: cat \$bsp_path/thermal/port_amb |  |  |  |

# 3.17.42 **Read Switch Power Supply Temperature**

| Node name       | \$bsp_path/thermal/psu <psu module="" number=""></psu>             |  |        |  |
|-----------------|--|--|--------|--|
| Description     | Read value of power sup  | Read value of power supply temperature |        |  |
| Access          | Read only  |  |        |  |
| Release version | 1.0  |  |        |  |
| Arguments       | Name   | Data type                              | Values |  |
|                 | Thermal Integer Degrees in mili Celsius                            |  |        |  |
| Example         | Get switch power supply 1 temperature: cat \$bsp_path/thermal/psu1 |  |        |  |

# 3.18 Watchdog

#### 3.18.1 Read Boot Status

| Node name       | \$bsp_path/watchdog/main/bootstatus<br>\$bsp_path/watchdog/aux/bootstatus                    |                          |          |  |
|-----------------|--|--------------------------|----------|--|
| Description     | Get indication if last boo   | t result from WD (32-wd, | 0-other) |  |
| Access          | Read only  | Read only                |          |  |
| Release version | 1.0  |                          |          |  |
| Arguments       | Name   | Data type                | Values   |  |
|                 | watchdog   | Integer                  | 0,32     |  |
| Example         | Get watchdog: cat \$bsp_path/watchdog/main/bootstatus cat \$bsp_path/watchdog/aux/bootstatus |                          |          |  |

## 3.18.2 **Read Identity**

| Node name       | · · · = ·          | \$bsp_path/watchdog/main/identity \$bsp_path/watchdog/aux/identity                       |  |  |  |
|-----------------|--------------------|--|--|--|--|
| Description     | Get wd instance (n | Get wd instance (main or aux)  |  |  |  |
| Access          | Read only          | Read only  |  |  |  |
| Release version | 1.0                | 1.0  |  |  |  |
| Arguments       | Name               | Name Data type Values  |  |  |  |
|                 | watchdog           | watchdog string "mlx-wdt-main" or "mlx-wdt-aux"  |  |  |  |
| Example         | ' <b>-</b> '       | Get watchdog: cat \$bsp_path/watchdog/main/identity cat \$bsp_path/watchdog/aux/identity |  |  |  |

### 3.18.3 Read No Way Out

| Node name       | \$bsp_path/watchdog/main/nowayout  |  |  |  |
|-----------------|--|--|--|--|
|                 | \$bsp_path/watchdog/aux/nowayout   |  |  |  |
| Description     | Indication if watchdog can be stopped once started. (0-can be stopped, 1-no wayout). |  |  |  |
| Access          | Read only  |  |  |  |
| Release version | 1.0  |  |  |  |
| Arguments       | Name Data type Values  |  |  |  |

|         | watchdog  | Integer | 0,1 |
|---------|---|---------|-----|
| Example | Get watchdog:<br>cat \$bsp_path/watchdog<br>cat \$bsp_path/watchdog |         |     |

### 3.18.4 Read State

| Node name       | · · - ·           | \$bsp_path/watchdog/main/state<br>\$bsp_path/watchdog/aux/state                    |                                |  |  |
|-----------------|-------------------|--|--------------------------------|--|--|
| Description     | Get watchdog stat | e (enable/disable)   |                                |  |  |
| Access          | Read only         |  |                                |  |  |
| Release version | 1.0               | 1.0  |                                |  |  |
| Arguments       | Name              | Name Data type Values  |                                |  |  |
|                 | watchdog          | string   | "active"<br>-or-<br>"inactive" |  |  |
| Example         | · · · · ·         | Get watchdog: cat \$bsp_path/watchdog/main/state cat \$bsp_path/watchdog/aux/state |                                |  |  |

# 3.18.5 **Read Status**

| Node name       | \$bsp_path/watchdog/main/status<br>\$bsp_path/watchdog/aux/status  |  |  |
|-----------------|--|--|--|
| Description     | Get bitmap of WD extra information, like: is the watchdog timer running/active, or is the nowayout bit set. same as #3 & #4. |  |  |
| Access          | Read only  |  |  |
| Release version | 1.0  |  |  |
| Arguments       | Name Data type Values  |  |  |
|                 | watchdog Hex 2bytes  |  |  |
| Example         | Get watchdog: cat \$bsp_path/watchdog/main/status cat \$bsp_path/watchdog/aux/status   |  |  |

#### 3.18.6 **Read Timeout**

| Node name   | \$bsp_path/watchdog/main/timeout |
|-------------|----------------------------------|
|             | \$bsp_path/watchdog/aux/timeout  |
| Description | Read watchdog real value.        |
|             | Type1 – 1-32 (seconds)           |

|                 | Type2 – 1-255(seconds)   |         |           |
|-----------------|--|---------|-----------|
| Access          | Read only  |         |           |
| Release version | 1.0  |         |           |
| Arguments       | Name Data type Values  |         |           |
|                 | watchdog   | Integer | See above |
| Example         | Get watchdog: cat \$bsp_path/watchdog/main/timeout cat \$bsp_path/watchdog/aux/timeout |         |           |

### 3.18.7 **Read Timeleft**

| Node name       | \$bsp_path/watchdog/main/timeleft<br>\$bsp_path/watchdog/aux/timeleft                  |           |        |
|-----------------|--|-----------|--------|
| Description     | Read watchdog remaining timer (timeout – seconds from last keepalive)                  |           |        |
|                 | This value is in seconds.  |           |        |
|                 | * This attribute is not supported on IVB & Rangeley CPU based systems.                 |           |        |
| Access          | Read only  |           |        |
| Release version | 1.0  |           |        |
| Arguments       | Name   | Data type | Values |
|                 | watchdog Integer 0-255 seconds   |           |        |
| Example         | Get watchdog: cat \$bsp_path/watchdog/main/timeout cat \$bsp_path/watchdog/aux/timeout |           |        |

## 3.19 JTAG interface

#### 3.19.1 **Enable / Disable JTAG mechanism**

| Node name       | \$bsp_path/jtag/jtag_enable                         |   |        |  |
|-----------------|---|---|--------|--|
| Description     | Enable / Disable JTAG mech                          | Enable / Disable JTAG mechanism for CPLD burn |        |  |
| Access          | Write / Read only                                   | Write / Read only                             |        |  |
| Release version | 7.0010.2100   |   |        |  |
| Arguments       | Name  | Data type                                     | Values |  |
|                 | System attribute Integer 0 or 1                     |   |        |  |
| Example         | Enable JTAG:  |   |        |  |
|                 | echo 1 > \$bsp_path/jtag/jtag_enable  Disable JTAG: |   |        |  |
|                 | echo 0 > \$bsp_path/jtag/jt                         | ag_enable                                     |        |  |

### 3.19.2 **Set JTAG TCK pin**

| Node name       | \$bsp_path/jtag/jtag_tck                               |
|-----------------|--|
| Description     | JTAG TCK pin for bit-banging JTAG mechanism simulation |
| Access          | Write / Read only                                      |
| Release version | 7.0010.2100  |

| Arguments | Name                              | Data type | Values |
|-----------|-----------------------------------|-----------|--------|
|           | System attribute                  | Integer   | 0.514  |
|           |                                   |           | 0 or 1 |
| Example   | echo 1 > \$bsp_path/jtag/jtag_tck |           |        |

## 3.19.3 **Set JTAG TDI pin**

| Node name       | \$bsp_path/jtag/jtag_tdi                               |           |        |
|-----------------|--|-----------|--------|
| Description     | JTAG TDI pin for bit-banging JTAG mechanism simulation |           |        |
| Access          | Write / Read only                                      |           |        |
| Release version | 7.0010.2100  |           |        |
| Arguments       | Name   | Data type | Values |
|                 | System attribute Integer 0 or 1                        |           |        |
| Example         | echo 0 > \$bsp_path/jtag/jtag_tdi                      |           |        |

## 3.19.4 **Set JTAG TMS pin**

| Node name   | \$bsp_path/jtag/jtag_tms                               |
|-------------|--|
| Description | JTAG TMS pin for bit-banging JTAG mechanism simulation |
| Access      | Write / Read only                                      |

| Release version | 7.0010.2100                       |           |        |  |
|-----------------|-----------------------------------|-----------|--------|--|
| Arguments       | Name                              | Data type | Values |  |
|                 | System attribute                  | Integer   |        |  |
|                 |                                   |           | 0 or 1 |  |
| Example         | echo 1 > \$bsp_path/jtag/jtag_tms |           |        |  |

# 3.19.5 **Get JTAG TDO pin**

| Node name       | \$bsp_path/jtag/jtag_tdo                               |           |        |  |
|-----------------|--|-----------|--------|--|
| Description     | JTAG TDO pin for bit-banging JTAG mechanism simulation |           |        |  |
| Access          | Read only  |           |        |  |
| Release version | 7.0010.2100  |           |        |  |
| Arguments       | Name   | Data type | Values |  |
|                 | System attribute                                       | Integer   | 0 or 1 |  |
| Example         | cat \$bsp_path/jtag/jtag_tdo                           |           |        |  |

# 4 Thermal Control

The thermal algorithm controls is described in a separate document - Thermal Monitoring for Mellanox Systems with third party OS.pdf

#### 5 Drivers

#### 5.1 Hotplug

**TBD** 

#### 5.2 Watchdog

Mellanox watchdog device is implemented in a programmable logic device.

There are 2 types of HW watchdog implementations:

- ► Type 1 actual HW timeout defined as a power of 2 msec. For example: Timeout 20 sec is rounded up to 32768 msec. The maximum timeout period is 32 sec (32768 msec). Get time-left is not supported.
- ► Type 2 actual HW timeout defined in seconds and is the same as user-defined timeout. Maximum timeout is 255 sec. Get time-left is supported.

Type 1 HW watchdog implementation exists in old systems and all new systems have Type 2 HW watchdog. The two types of HW implementation also have a different register map.

Mellanox systems can have 2 watchdogs: Main and auxiliary. Main and auxiliary watchdog devices can be enabled together on the same system. There are several actions that can be defined in the watchdog: System reset, start fans on full speed, and increase register counter. The last 2 actions are performed without a system reset. Actions without reset are provided for the auxiliary watchdog device, which is optional.

Watchdog can be started during a probe. In this case it is pinged by the watchdog core before the watchdog device is opened by the user space application.

Watchdog can be initialized in using a nowayout method. That is, once started it cannot be stopped.

The mlx-wdt driver supports both HW watchdog implementations.

Watchdog driver is probed from the common mlx\_platform driver. Mlx\_platform driver provides an appropriate set of registers for Mellanox watchdog device, identity name (mlx-wdt-main or mlx-wdt-aux), initial timeout, performed action in expiration and configuration flags.

Watchdog configuration flags: nowayout and start\_at\_boot. HW watchdog version: type1 or type2. The driver checks during initialization if the previous system reset was done by the watchdog. If yes, it makes a notification about this event.

Access to HW registers is performed through a generic regmap interface.
